Simplified execution UI

Implementation snapshots

12 October 2026
Queue, one focused test, then final review.

34 actual simulator captures, grouped by implementation task. Earlier checkpoints show the component replacements in progress; the later result, queue, review, and photo chapters show the completed interface.

0 Workflow and baseline

Learned from ios-bass-app; stable build and simulator.

↓

1 Focus context and details

Prominent queue, quiet progress, toolbar references.

↓

2 Result input and additions

Required fields, neighboring +, autosave and confirmation.

↓

3 Queue and review

Ordered navigation, return paths, flags and submission.

↓

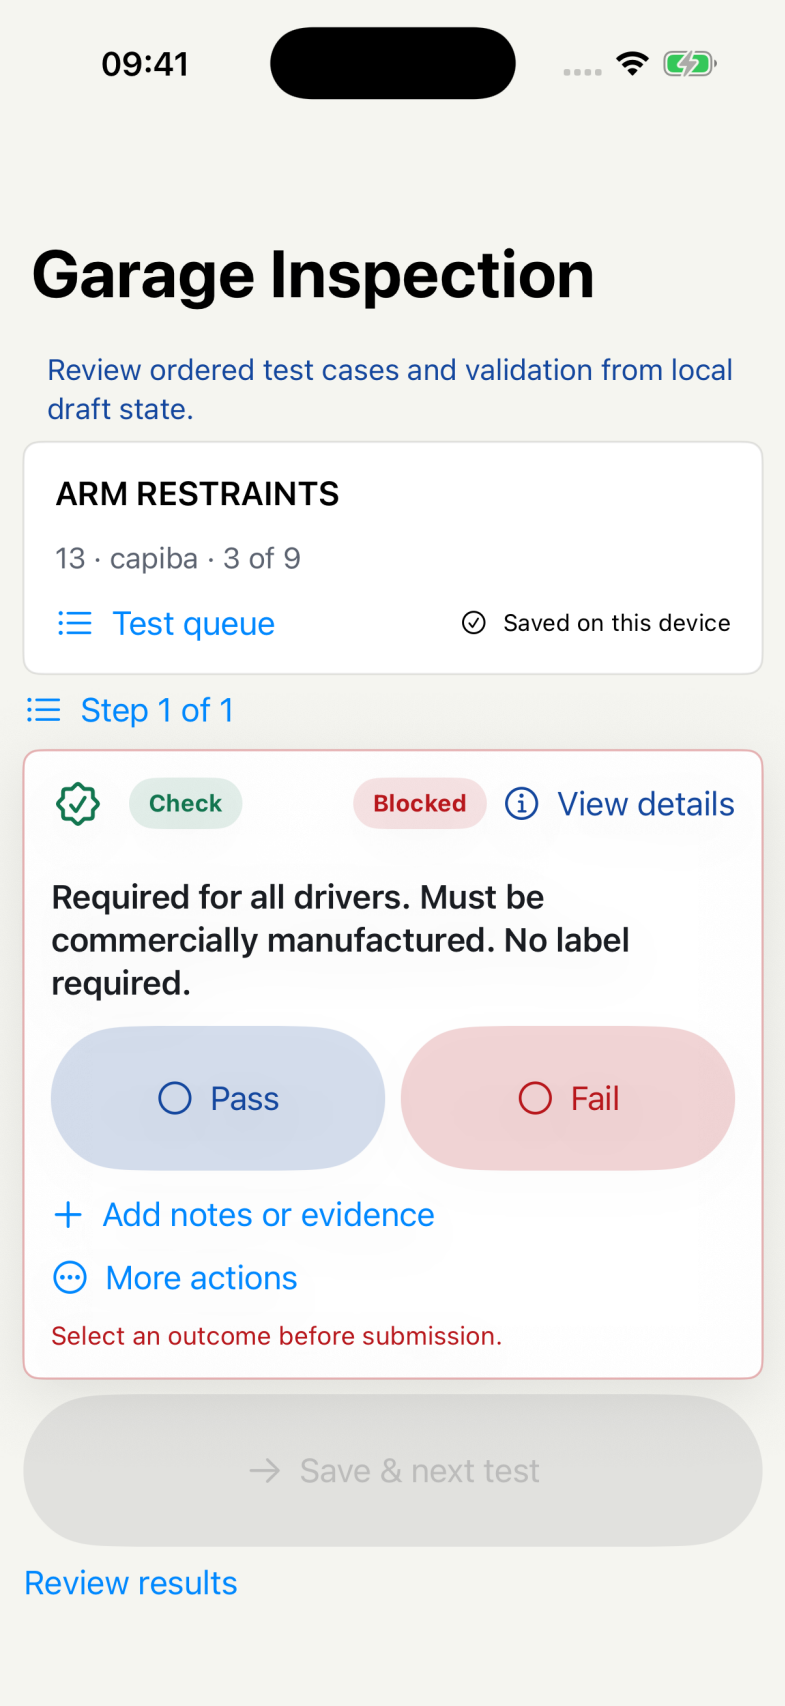

4 Final checks and PDF

Full suite, inspected snapshots, vertical Obsidian plan.

All diagrams in the Obsidian Canvas and this report run vertically. Capture and camera interaction still require physical-device validation.

Current focus

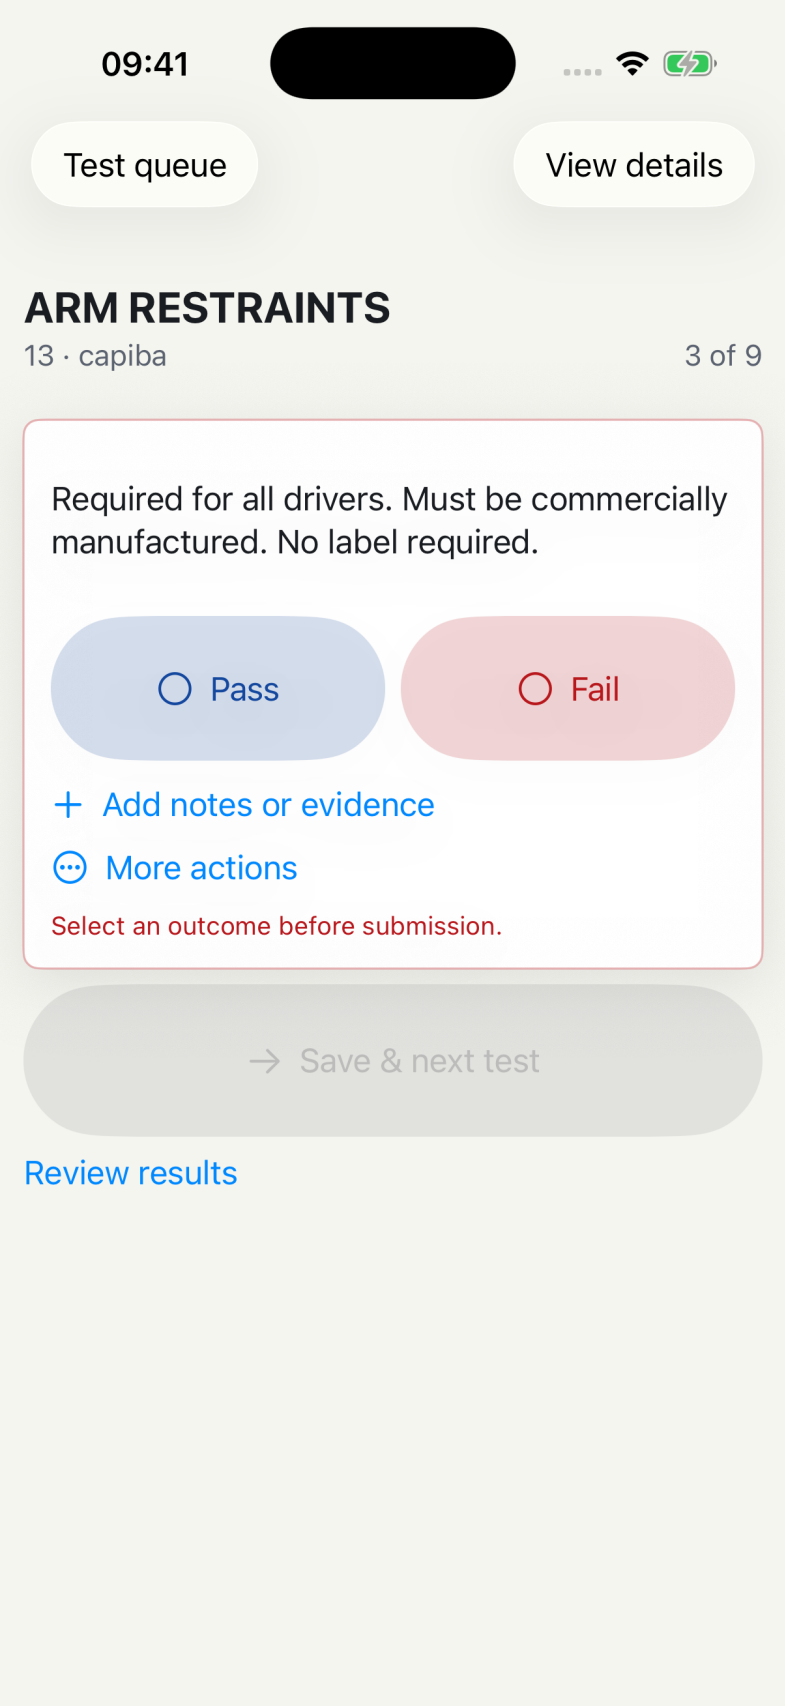

01-current-focus.png | checkpoint 9832364

Original stacked execution screen before replacing context, result controls, and secondary links.

Focus context

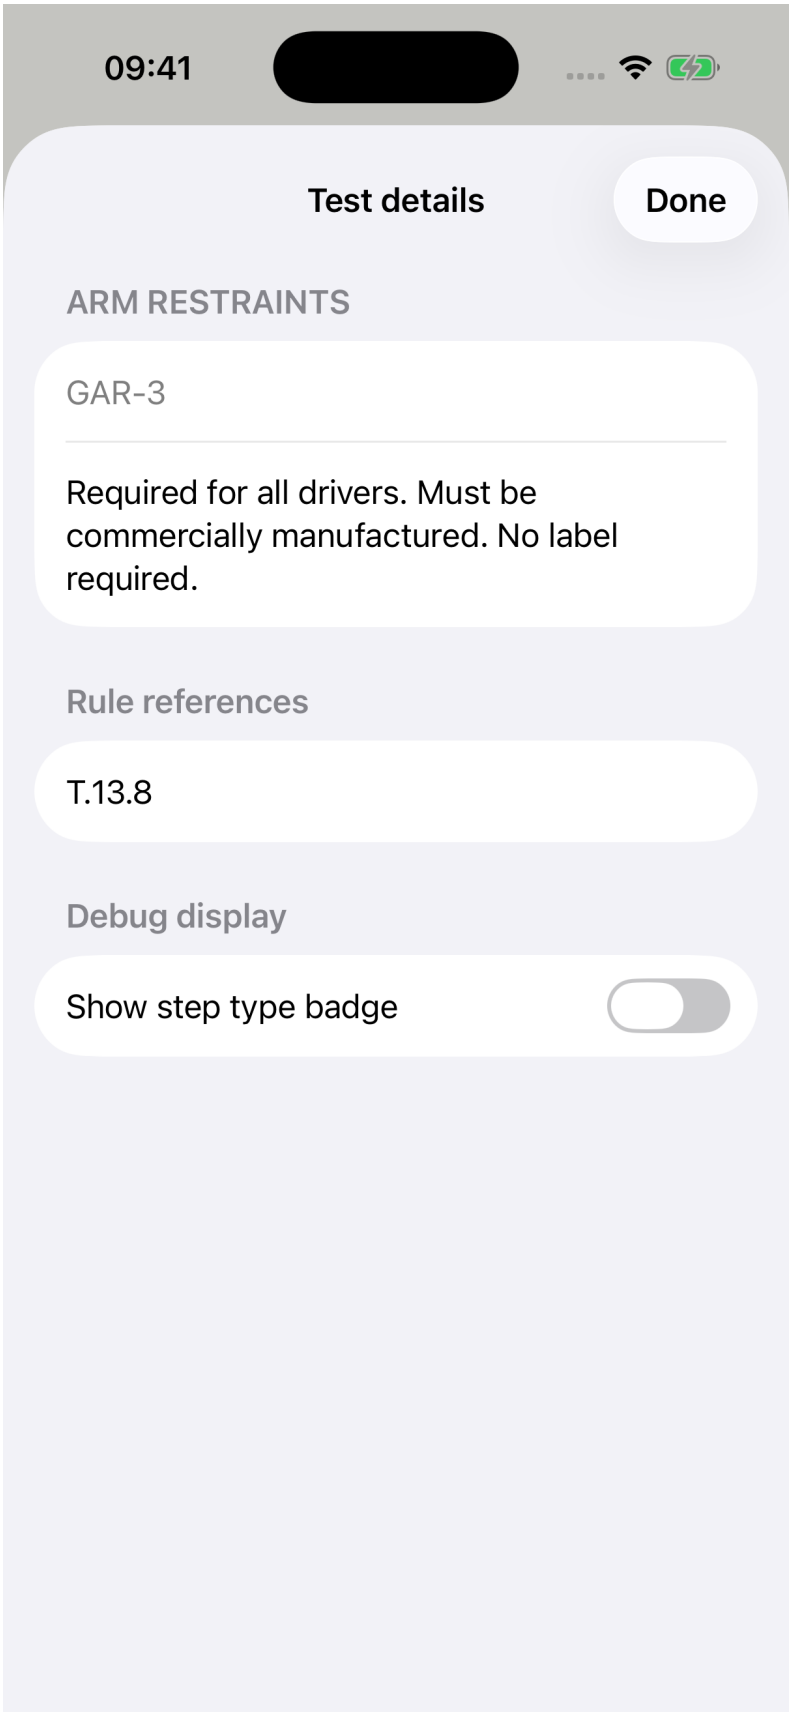

01-focus-context.png | checkpoint 9f62aac

labeled queue and details toolbar, quiet vehicle/progress, single-step navigation removed.

Details

02-details.png | checkpoint 9f62aac

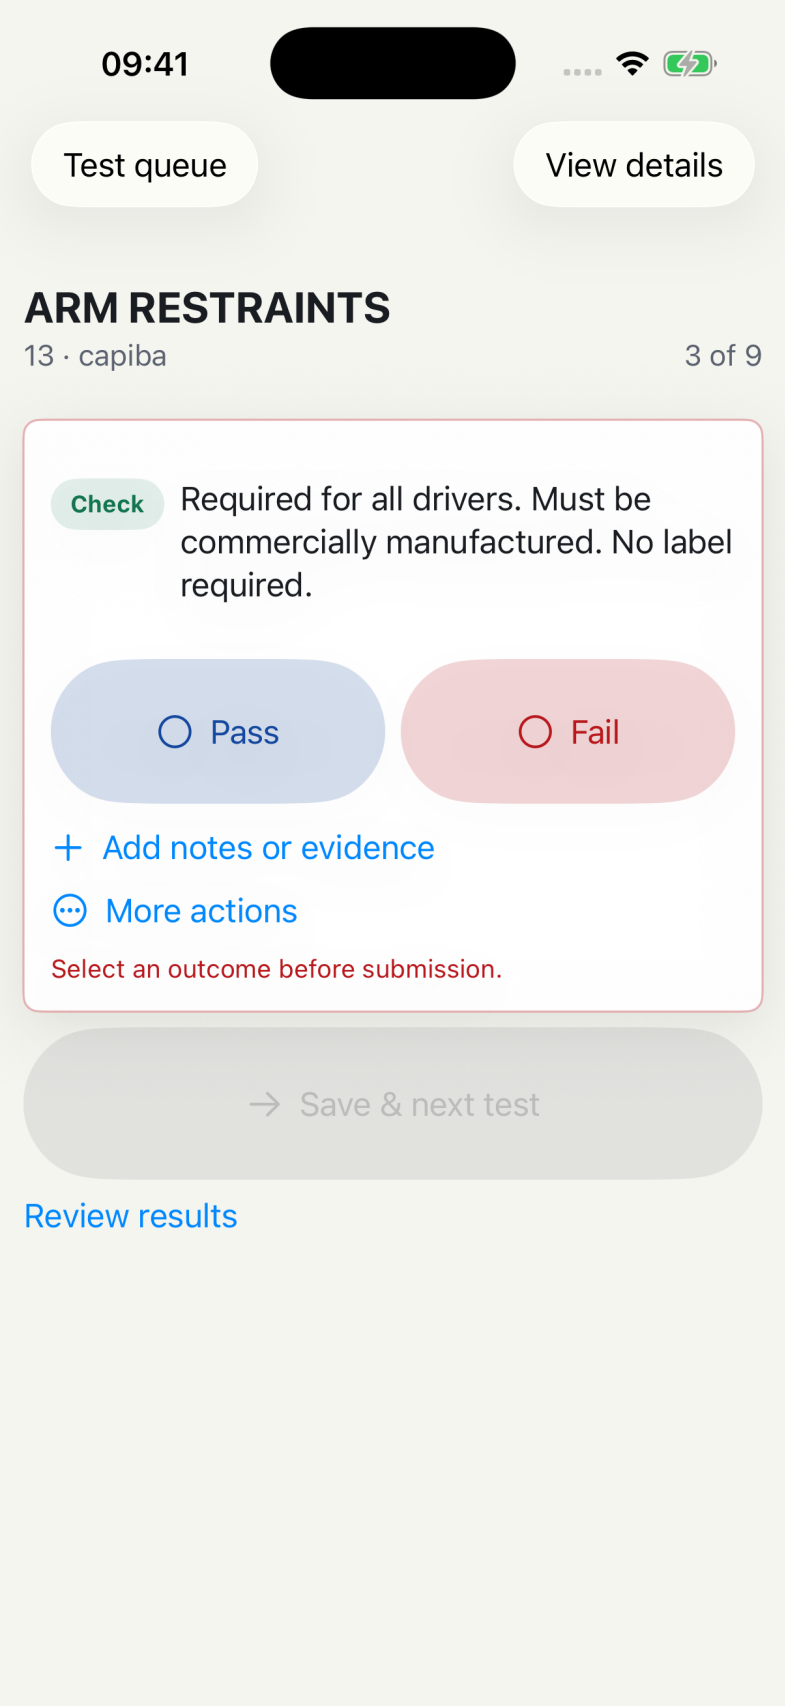

full criteria and reference sheet with explicit Done action.

Focus context and details

Debug badge

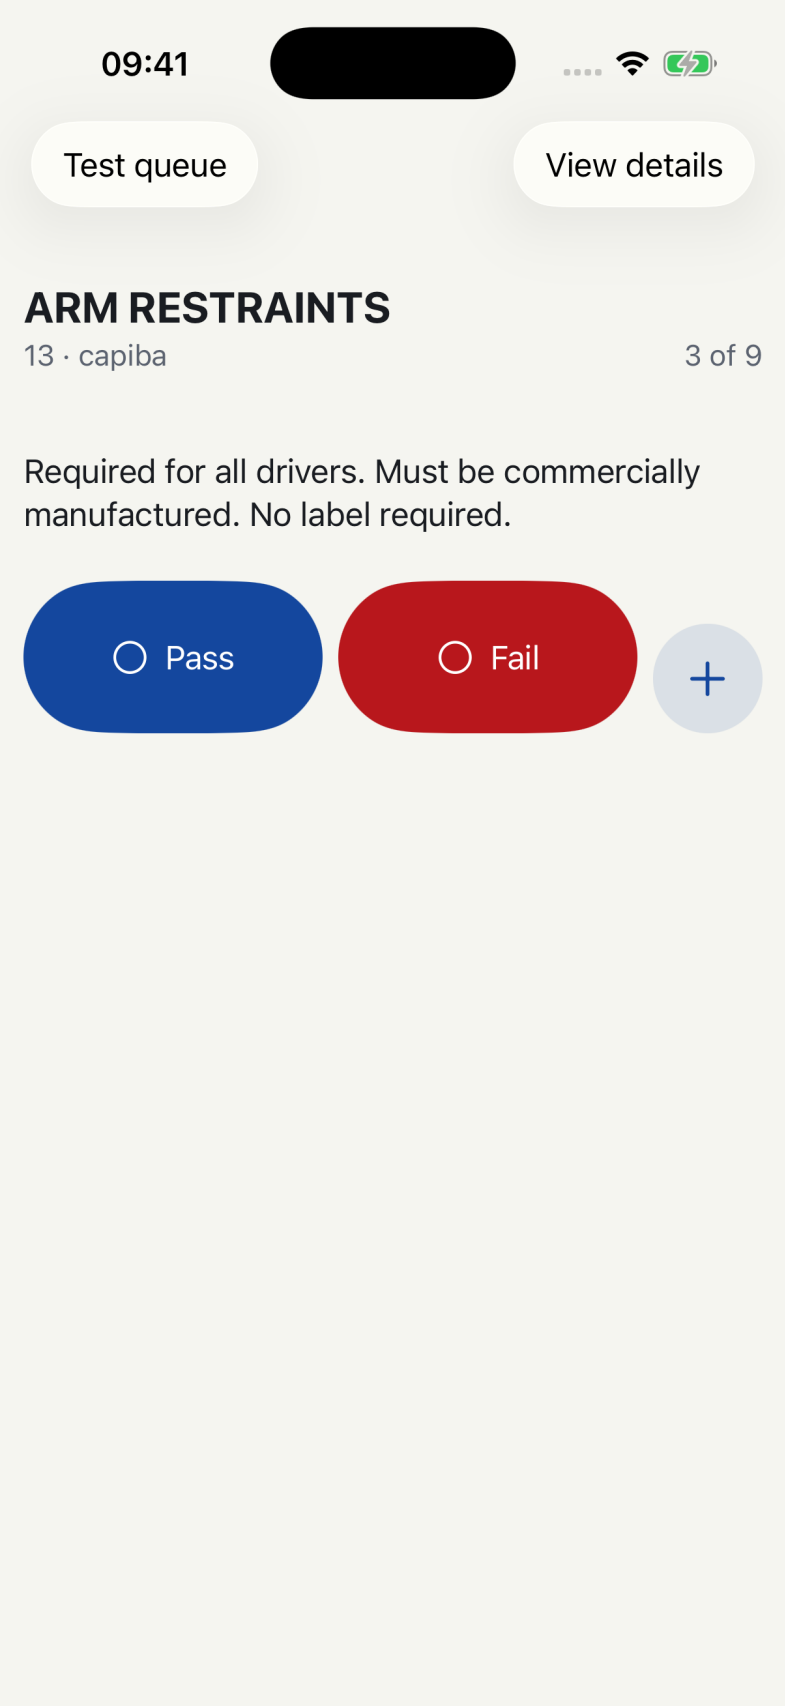

03-debug-badge.png | checkpoint 9f62aac

optional type badge to the left of the description.

Input

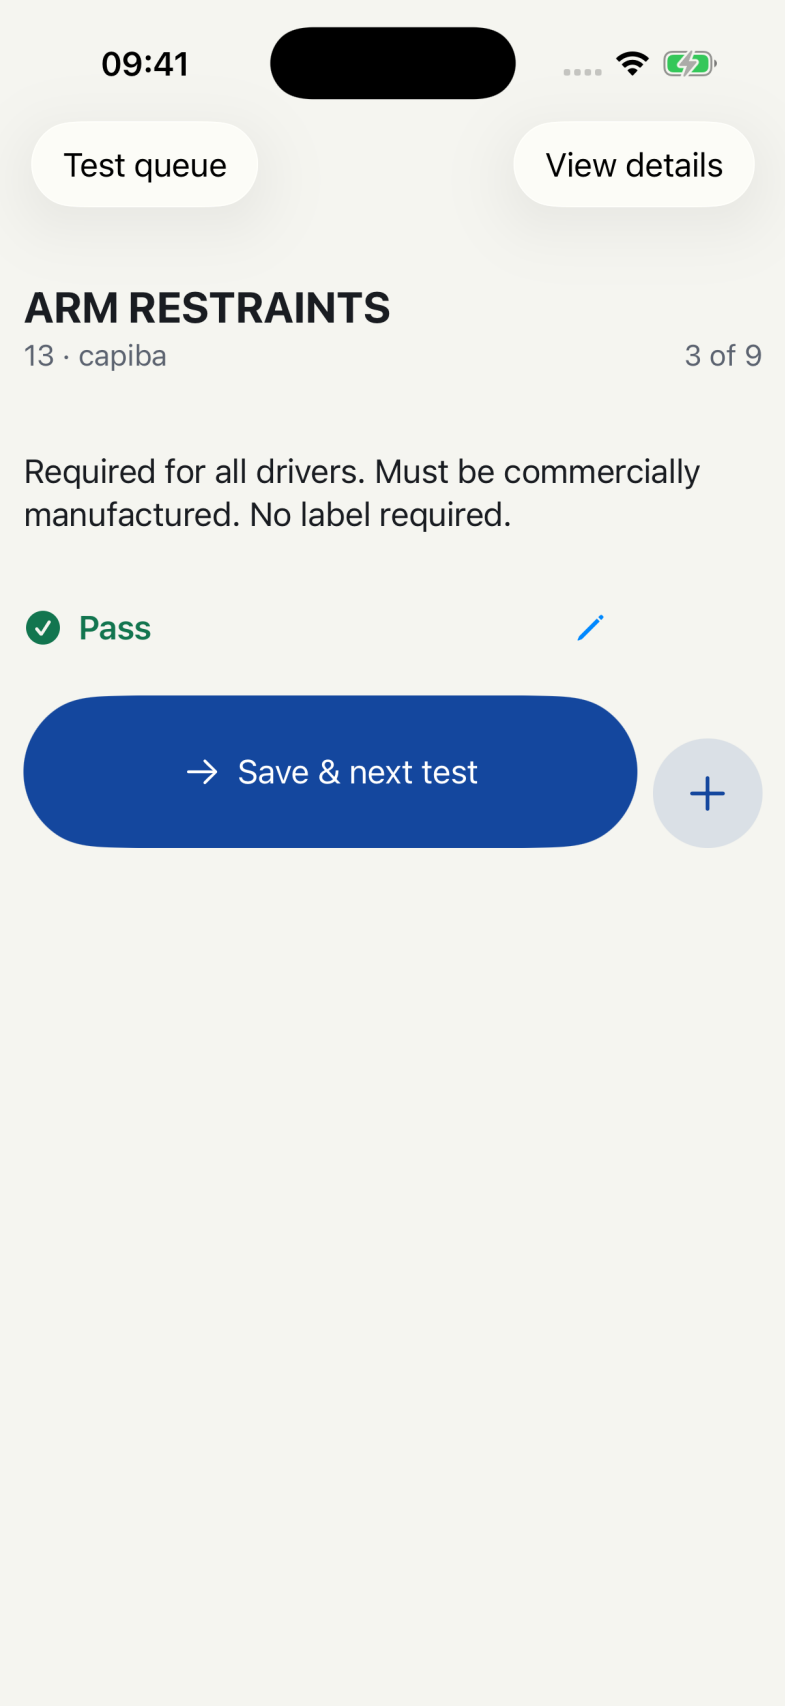

01-input.png | checkpoint d0ad464

Neutral required outcome input; no initial error or disabled Save button.

Ready

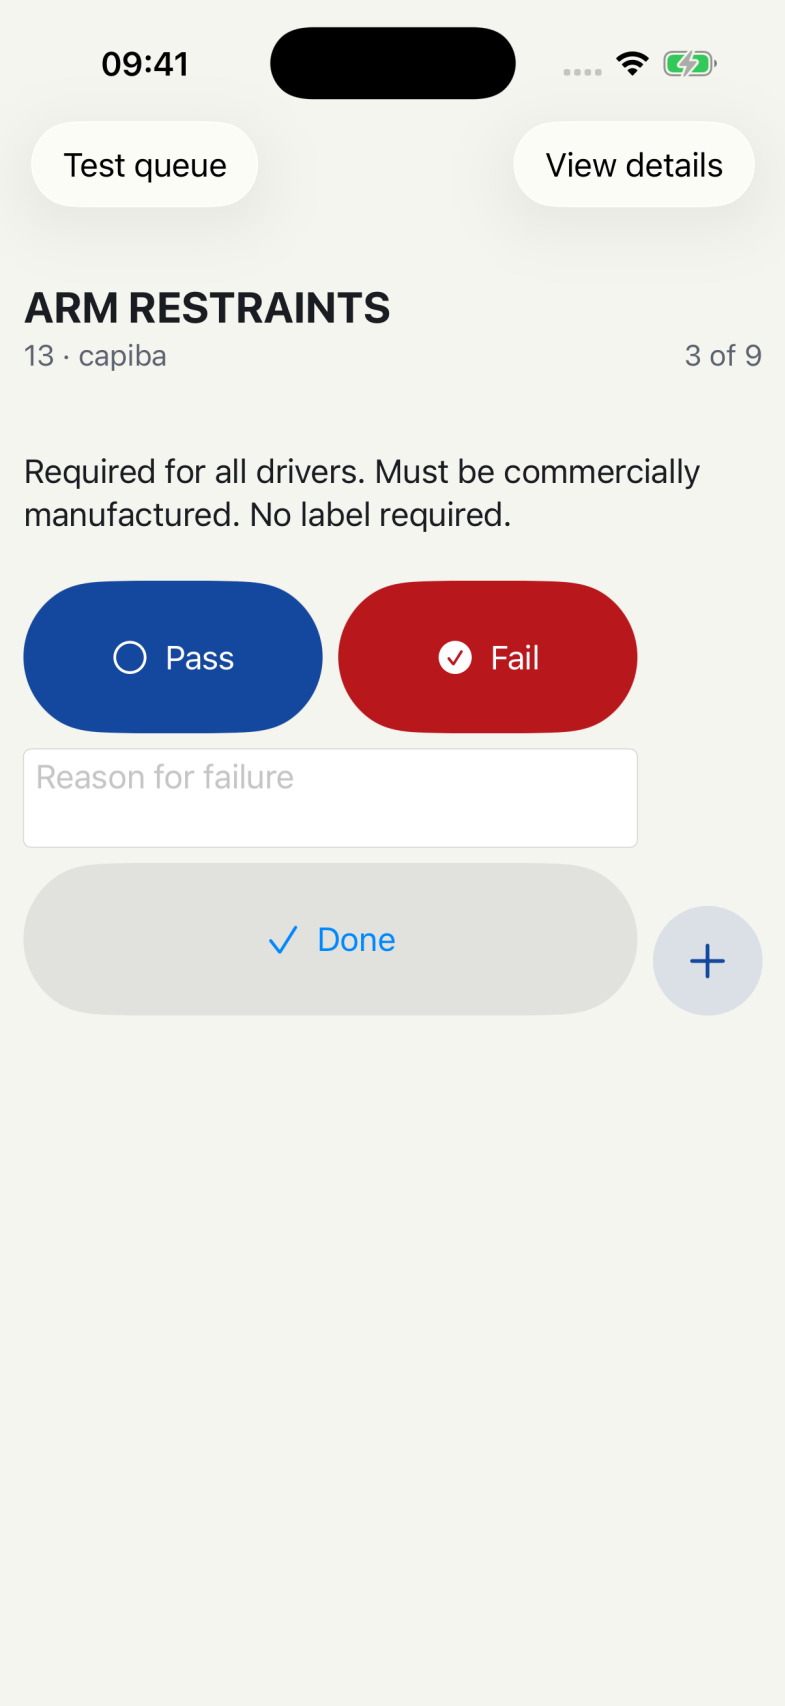

02-ready.png | checkpoint d0ad464

Pass selected: summary/edit path and Save & next replace input controls.

Required notes

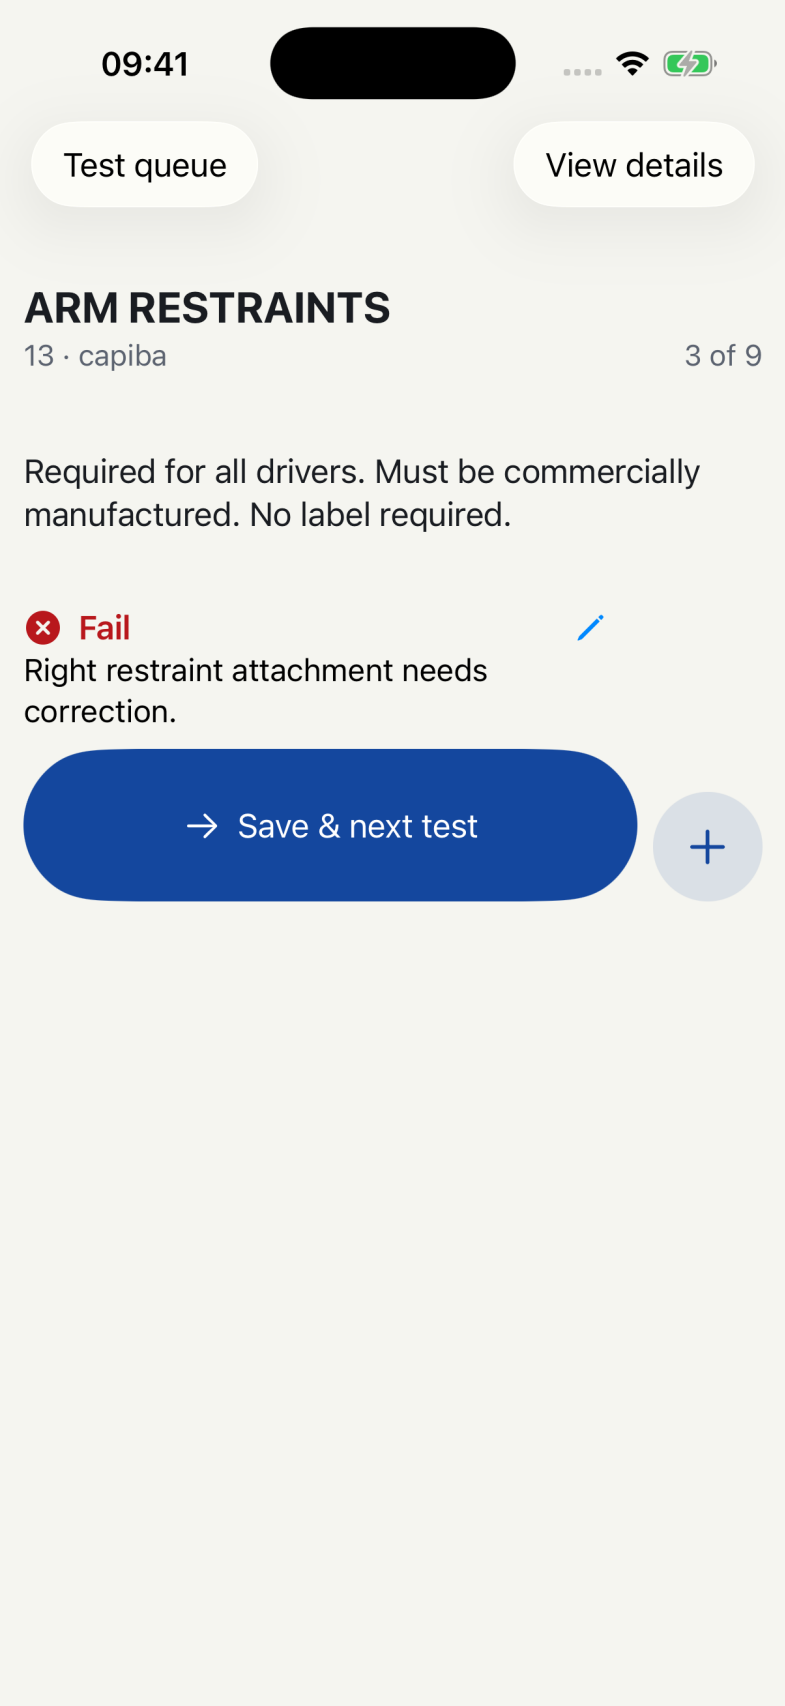

03-required-notes.png | checkpoint d0ad464

Fail reveals the required reason field before confirmation.

Fail ready

04-fail-ready.png | checkpoint d0ad464

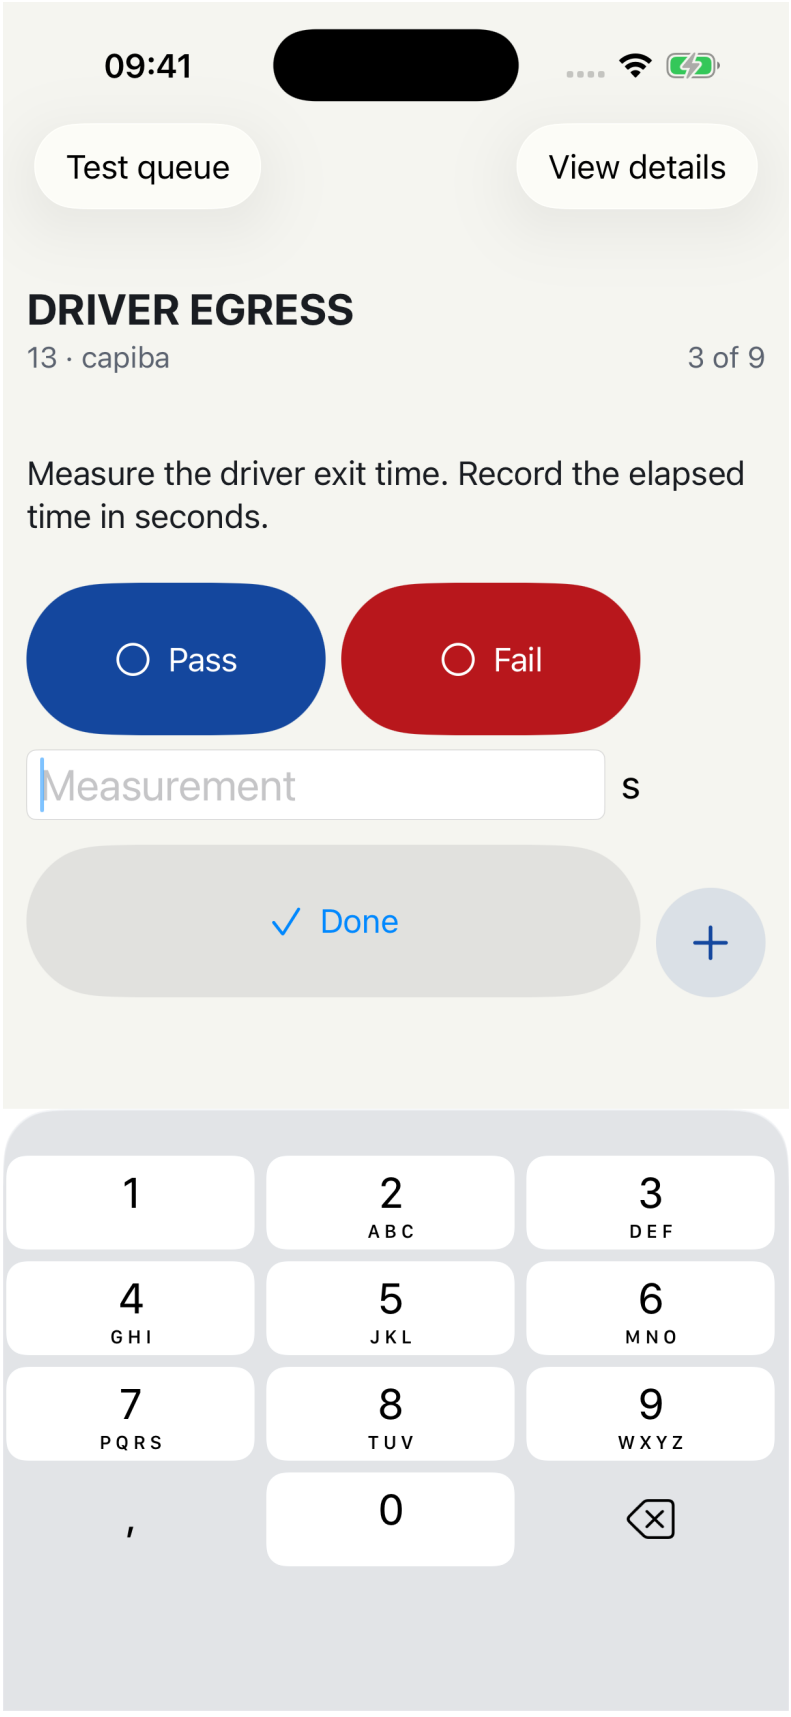

Failure reason retained beside the recorded outcome.

Result input, additions, and autosave

Measurement keyboard

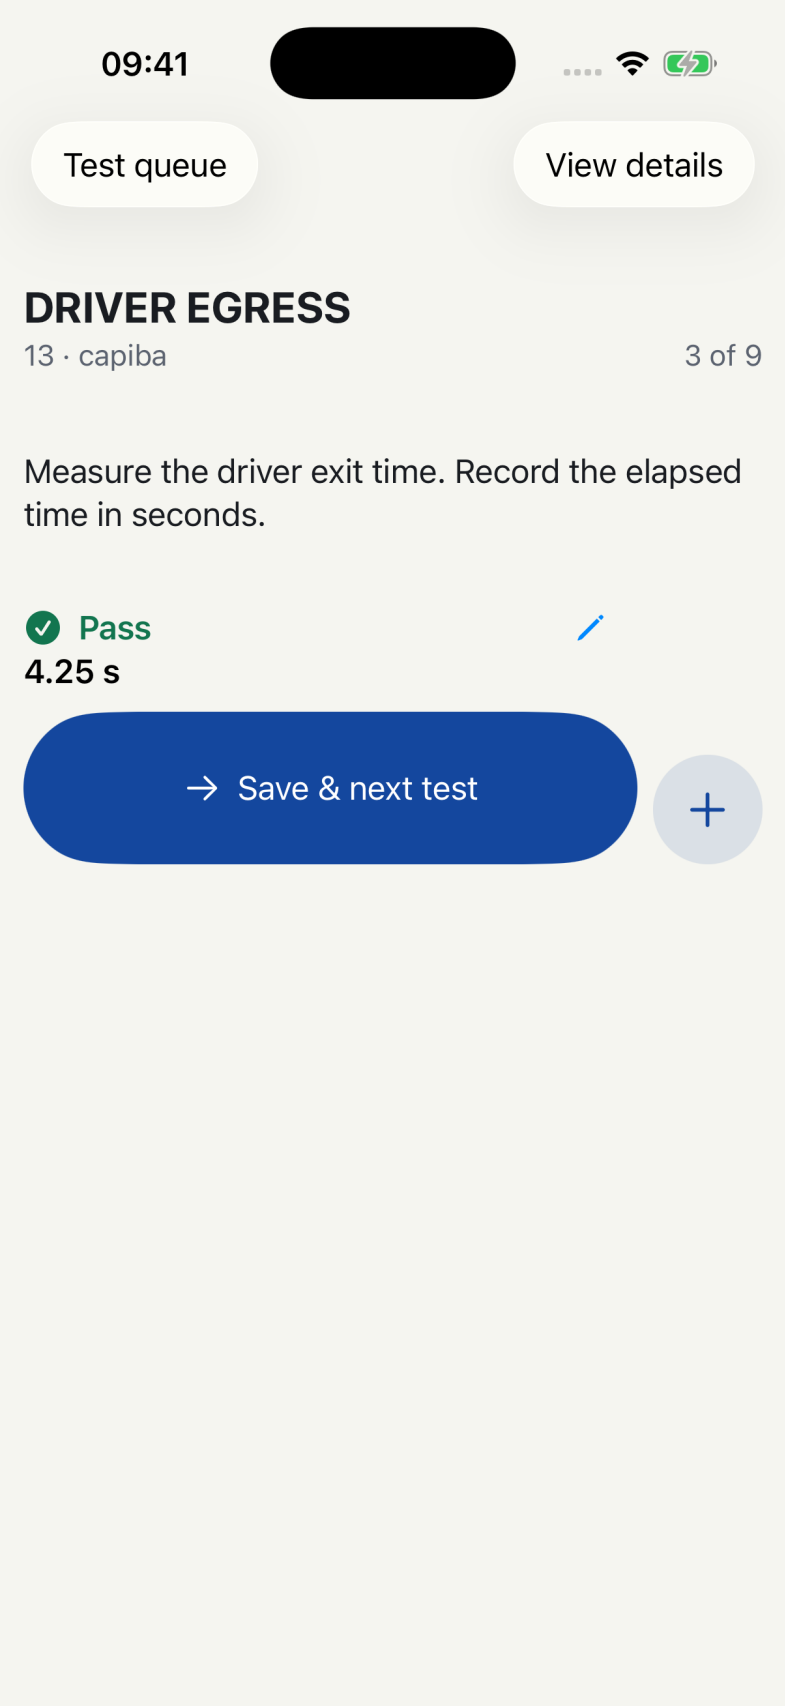

05-measurement-keyboard.png | checkpoint d0ad464

Required measurement, unit, decimal keyboard, and one visible Done action.

Measurement ready

06-measurement-ready.png | checkpoint d0ad464

Valid measurement becomes a concise result summary.

Photo input

07-photo-input.png | checkpoint d0ad464

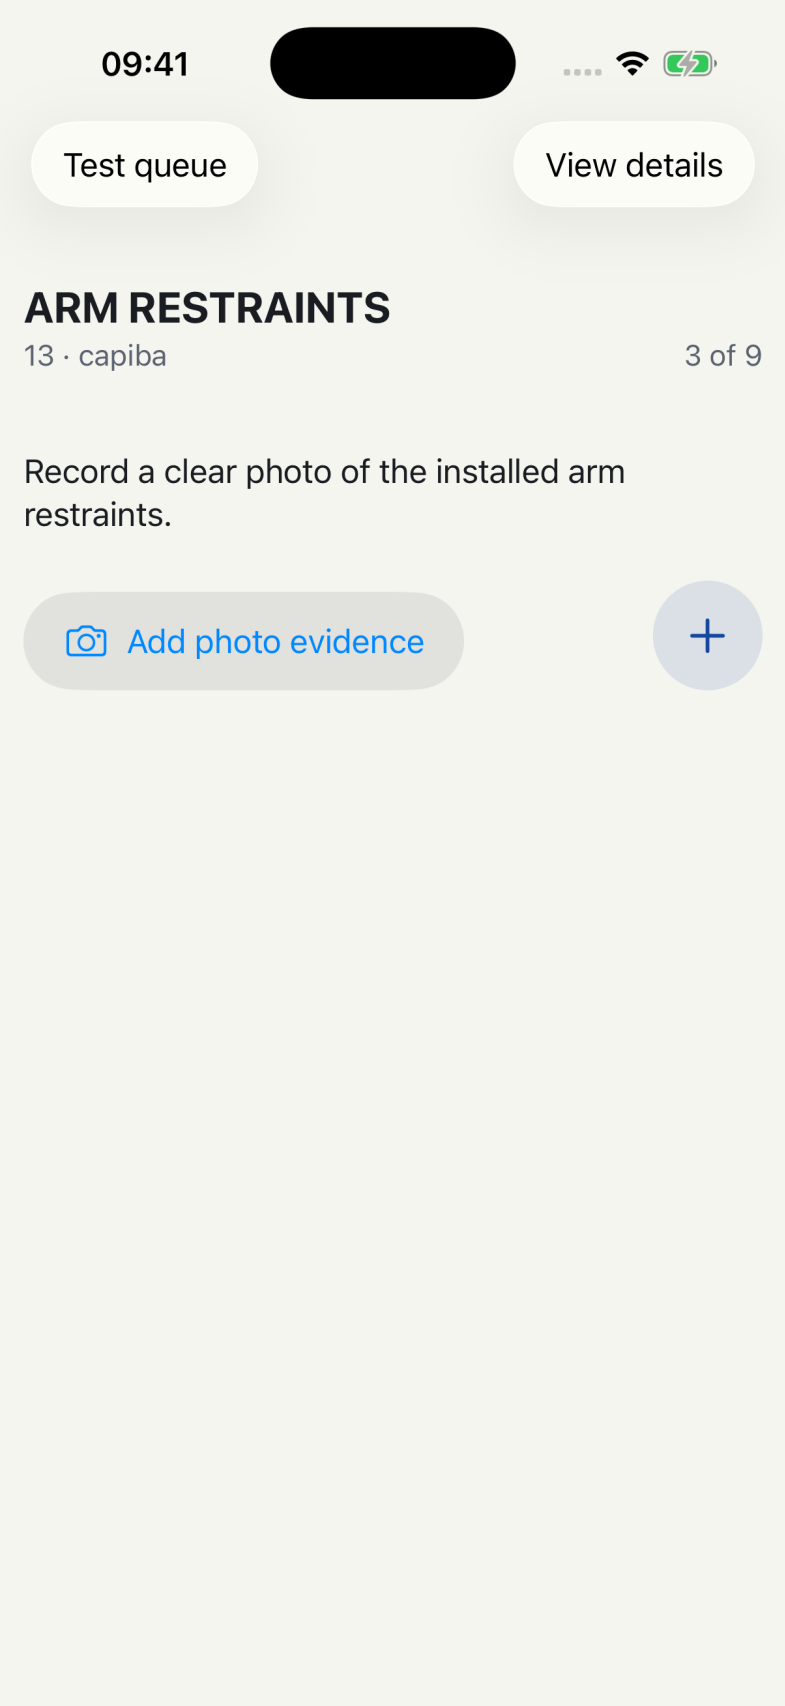

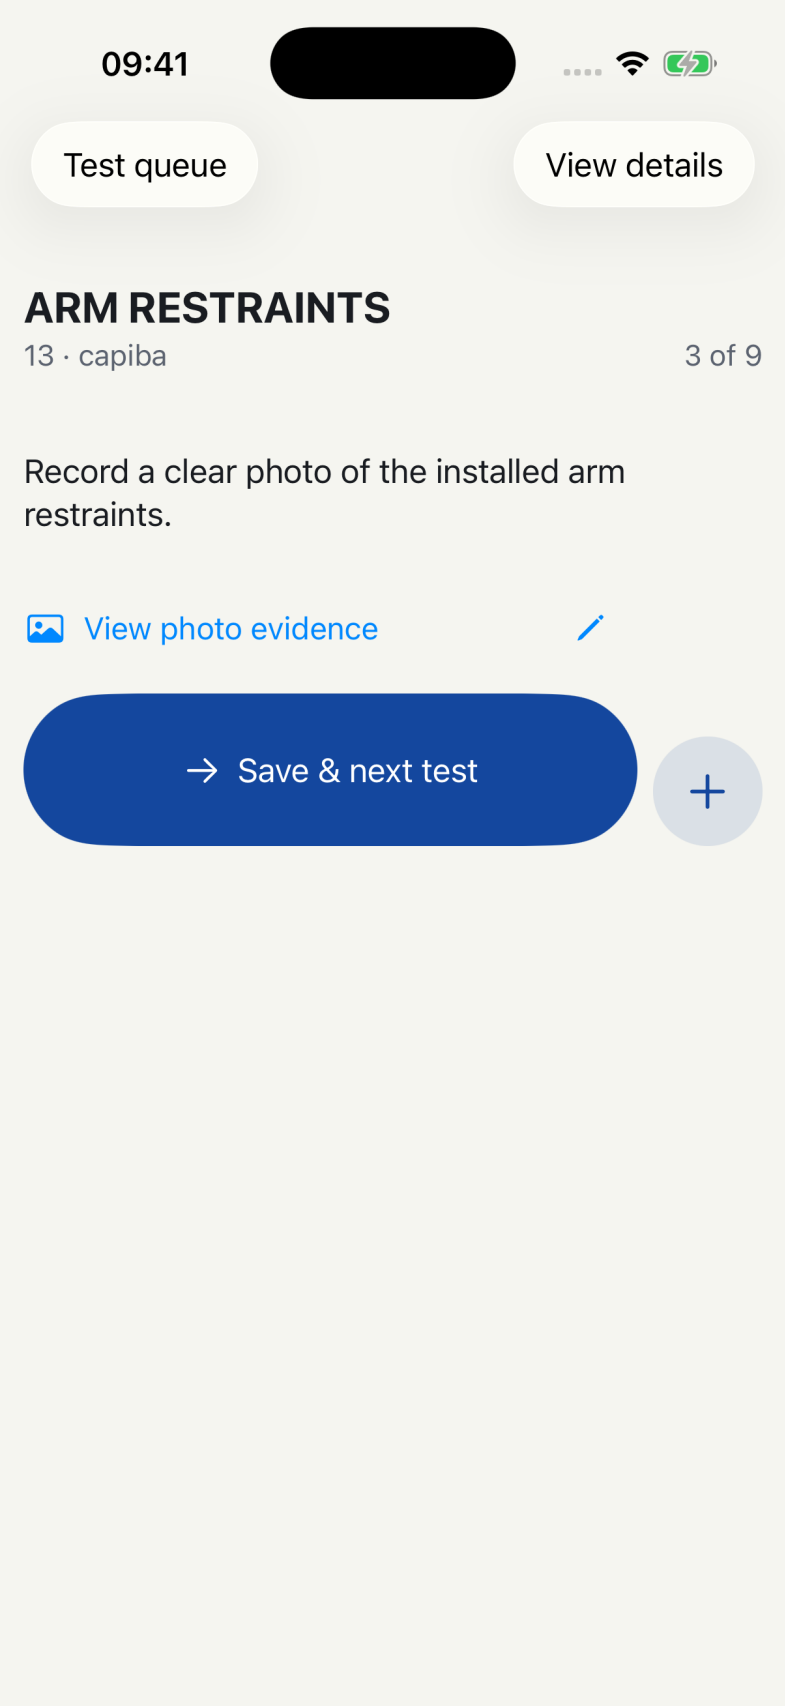

Photo-only schema shows required photo input without artificial Pass/Fail.

Photo ready

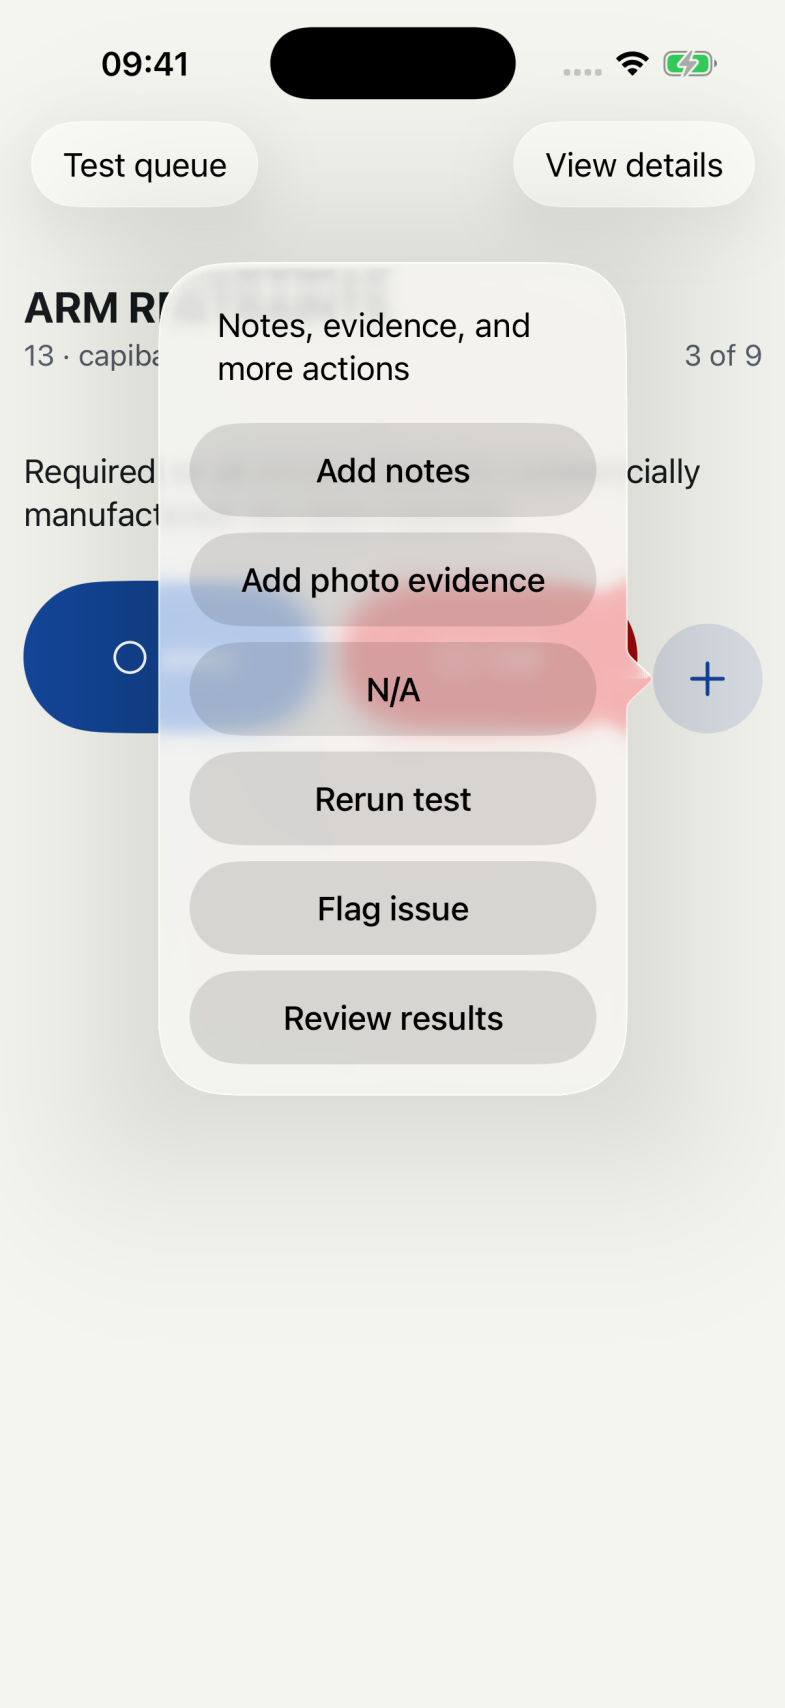

08-photo-ready.png | checkpoint d0ad464

Actual persisted fixture image enables photo preview and confirmation.

Plus menu

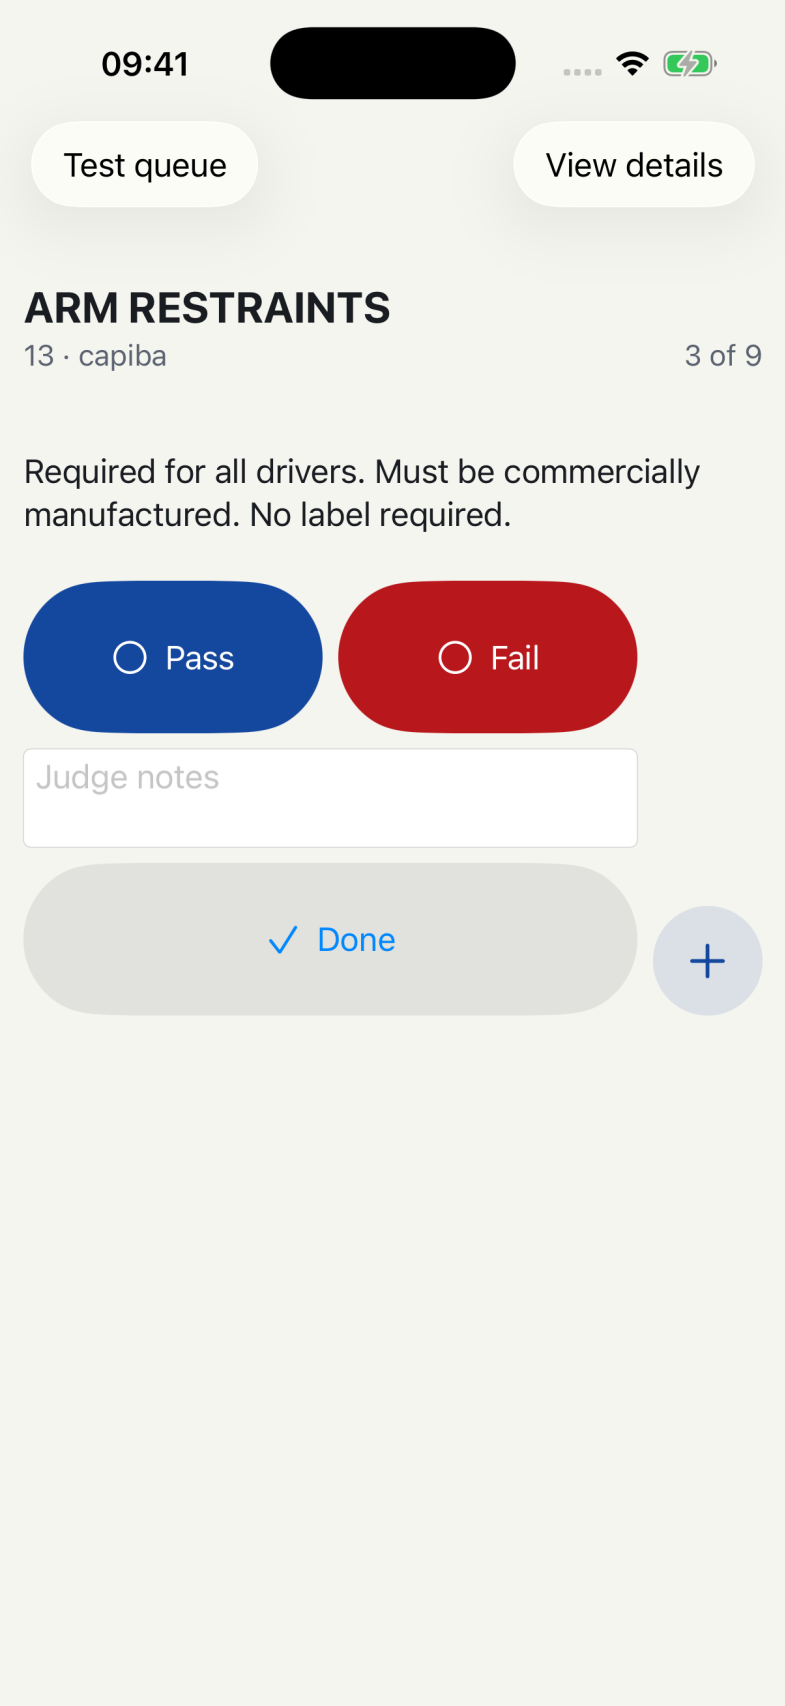

09-plus-menu.png | checkpoint d0ad464

Native secondary menu combines notes, photos, N/A, rerun, flag, and review.

Optional notes

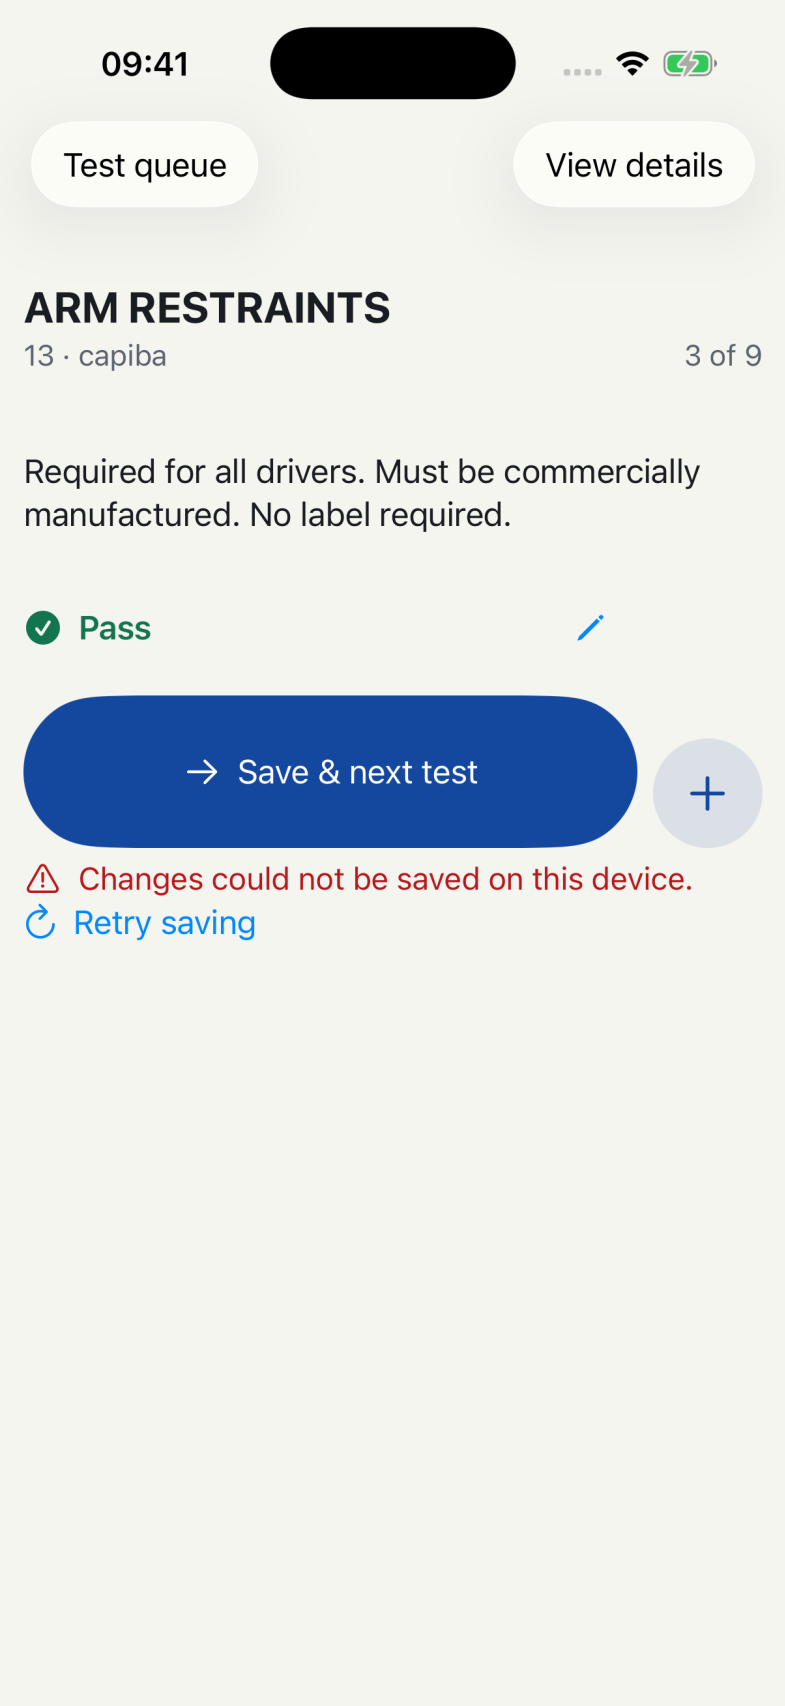

10-optional-notes.png | checkpoint d0ad464

Optional notes appear only after requested.

Save failure

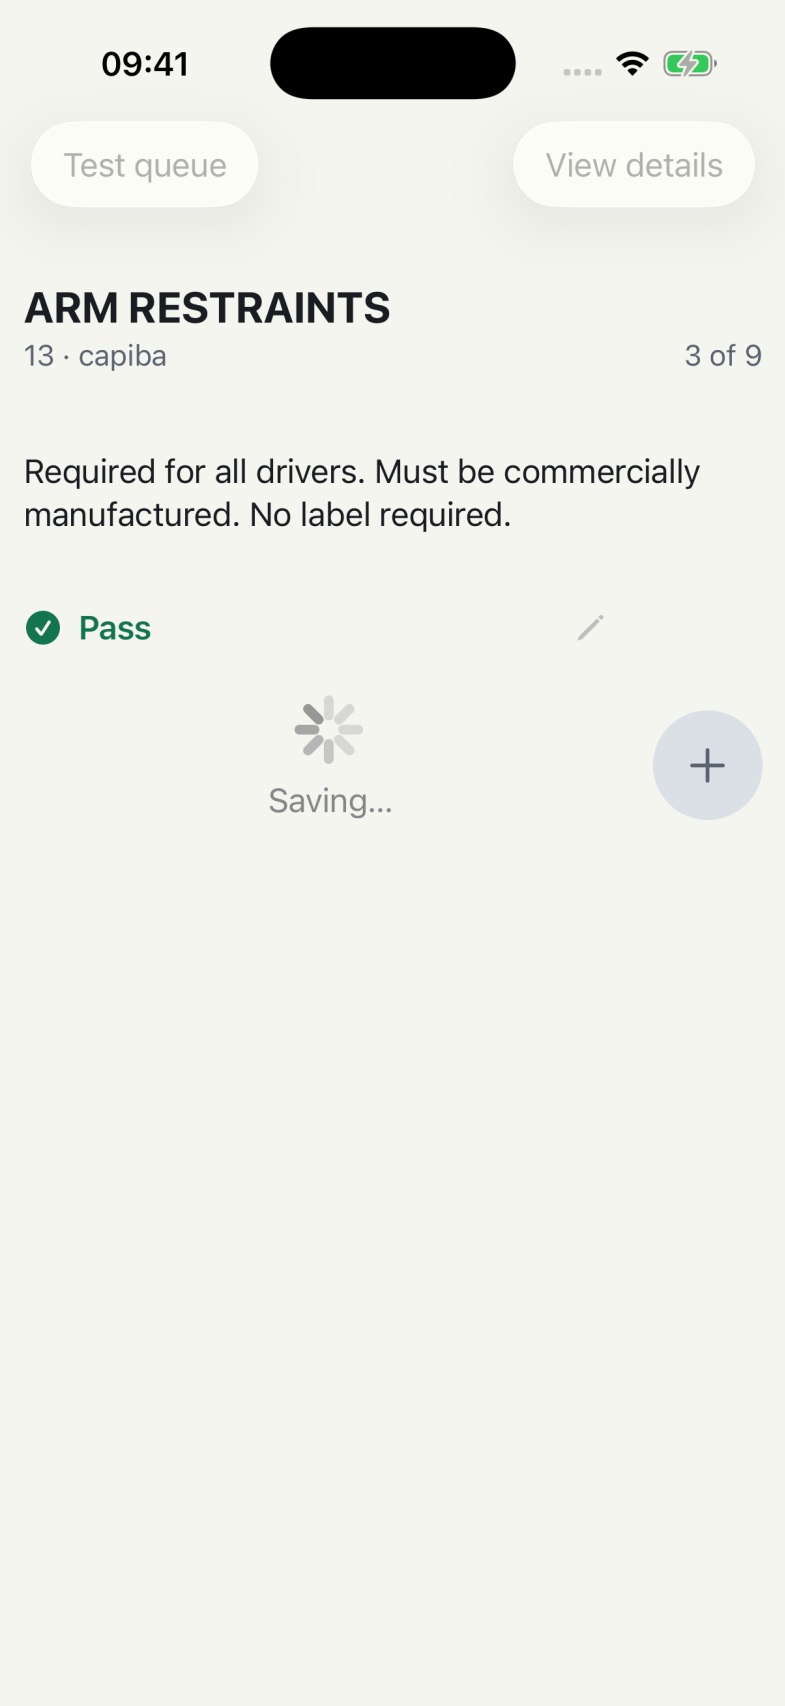

11-save-failure.png | checkpoint d0ad464

Failed write retains Pass and exposes retry without advancing.

Saving

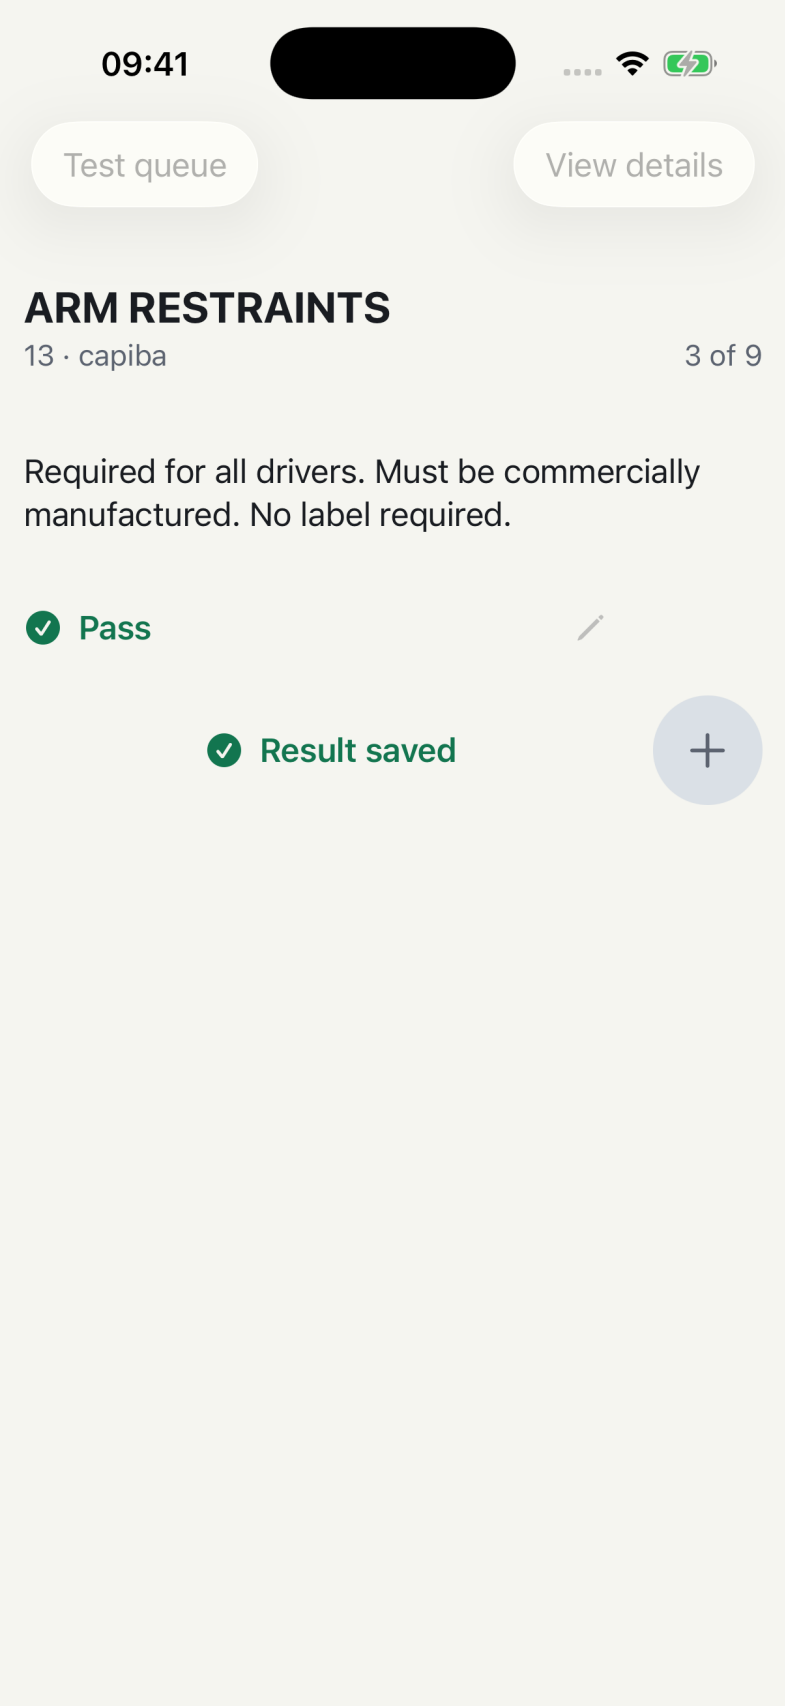

12-saving.png | checkpoint d0ad464

Saving replaces the primary action and disables navigation.

Confirmed

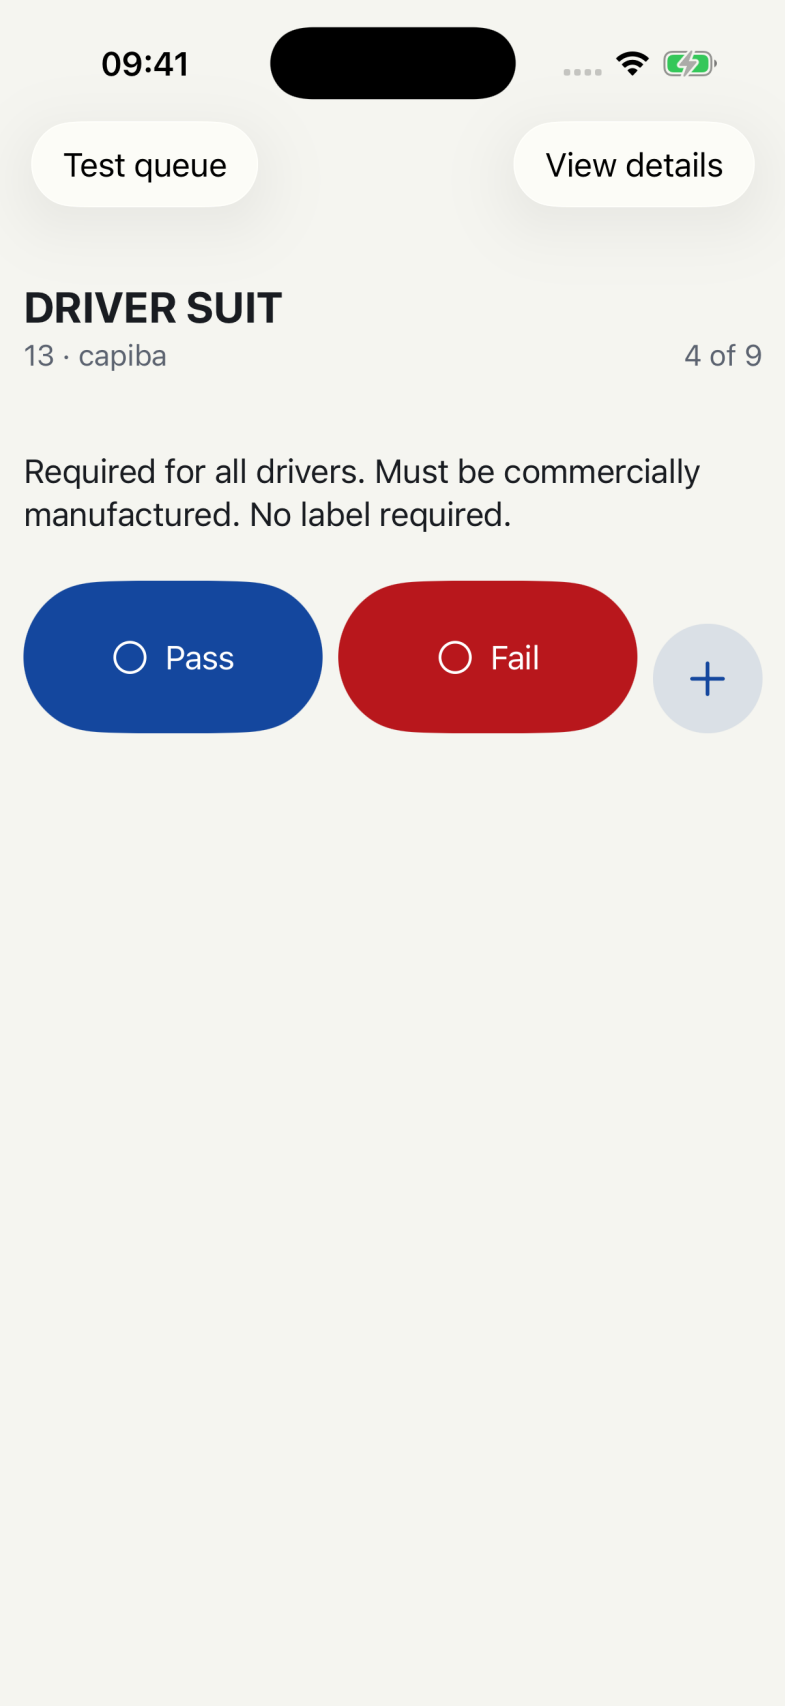

13-confirmed.png | checkpoint d0ad464

Brief success confirmation; this DEBUG fixture holds the transient state.

Next test

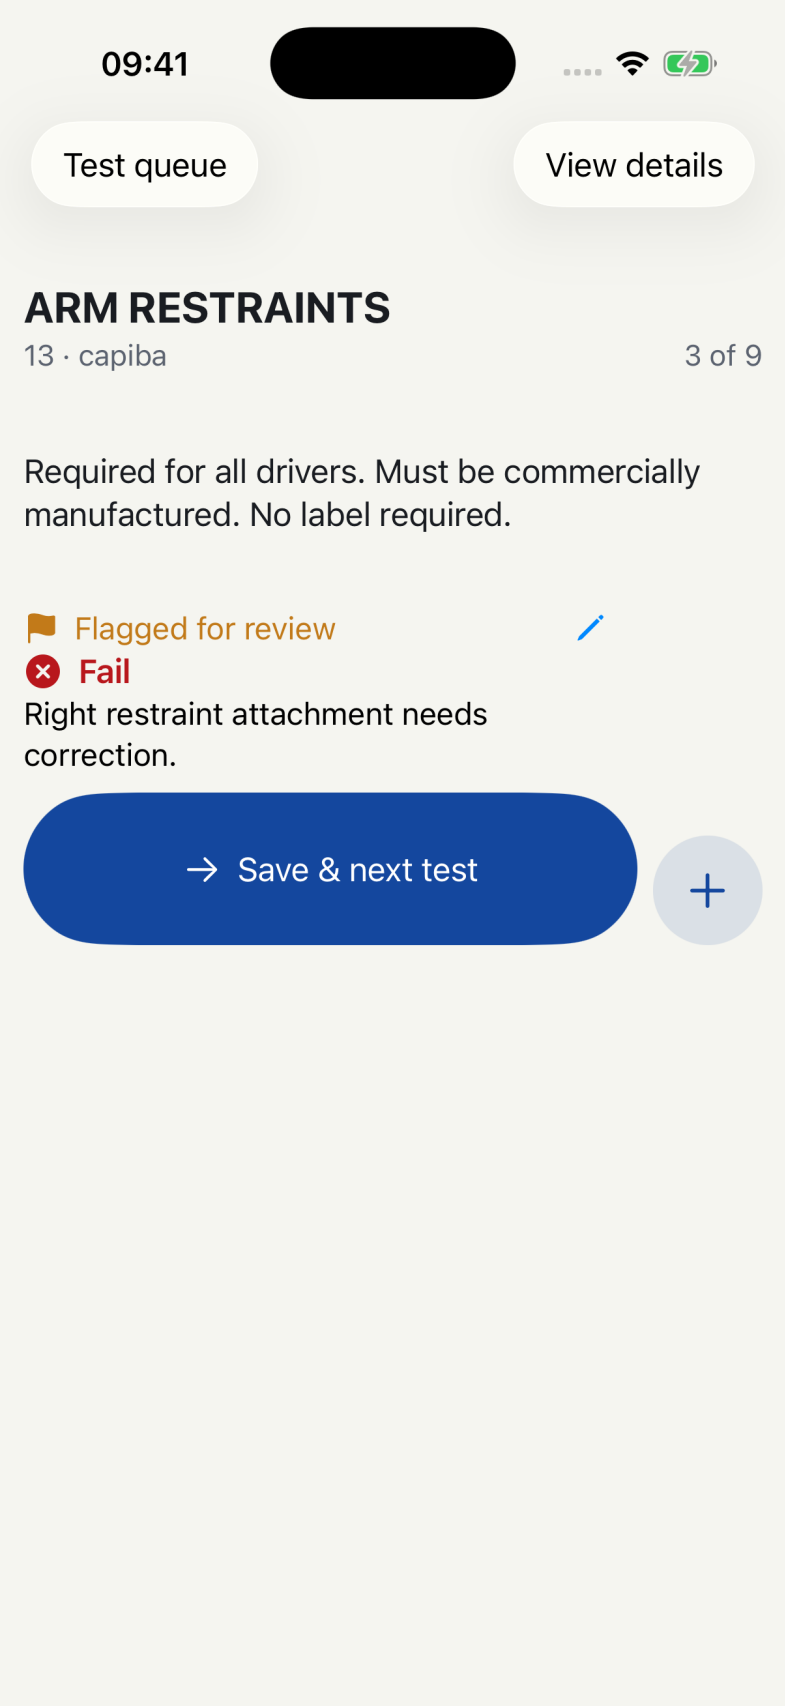

14-next-test.png | checkpoint d0ad464

Actual confirmation callback opens DRIVER SUIT, 4 of 9.

Flagged result

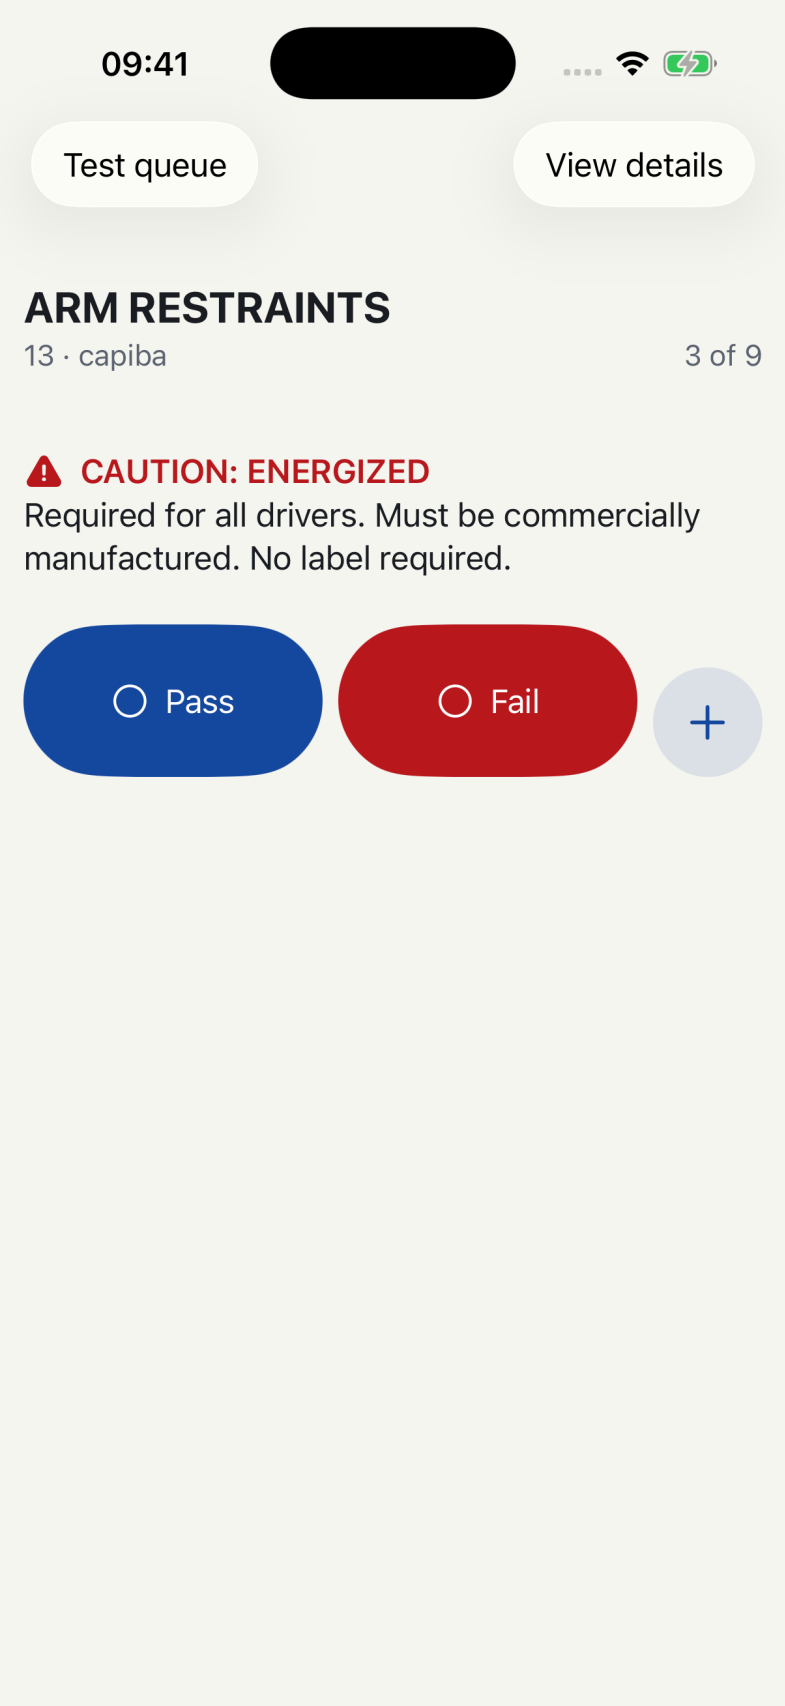

15-flagged-result.png | checkpoint d0ad464

Outcome and unresolved review flag remain separate.

Safety warning

16-safety-warning.png | checkpoint d0ad464

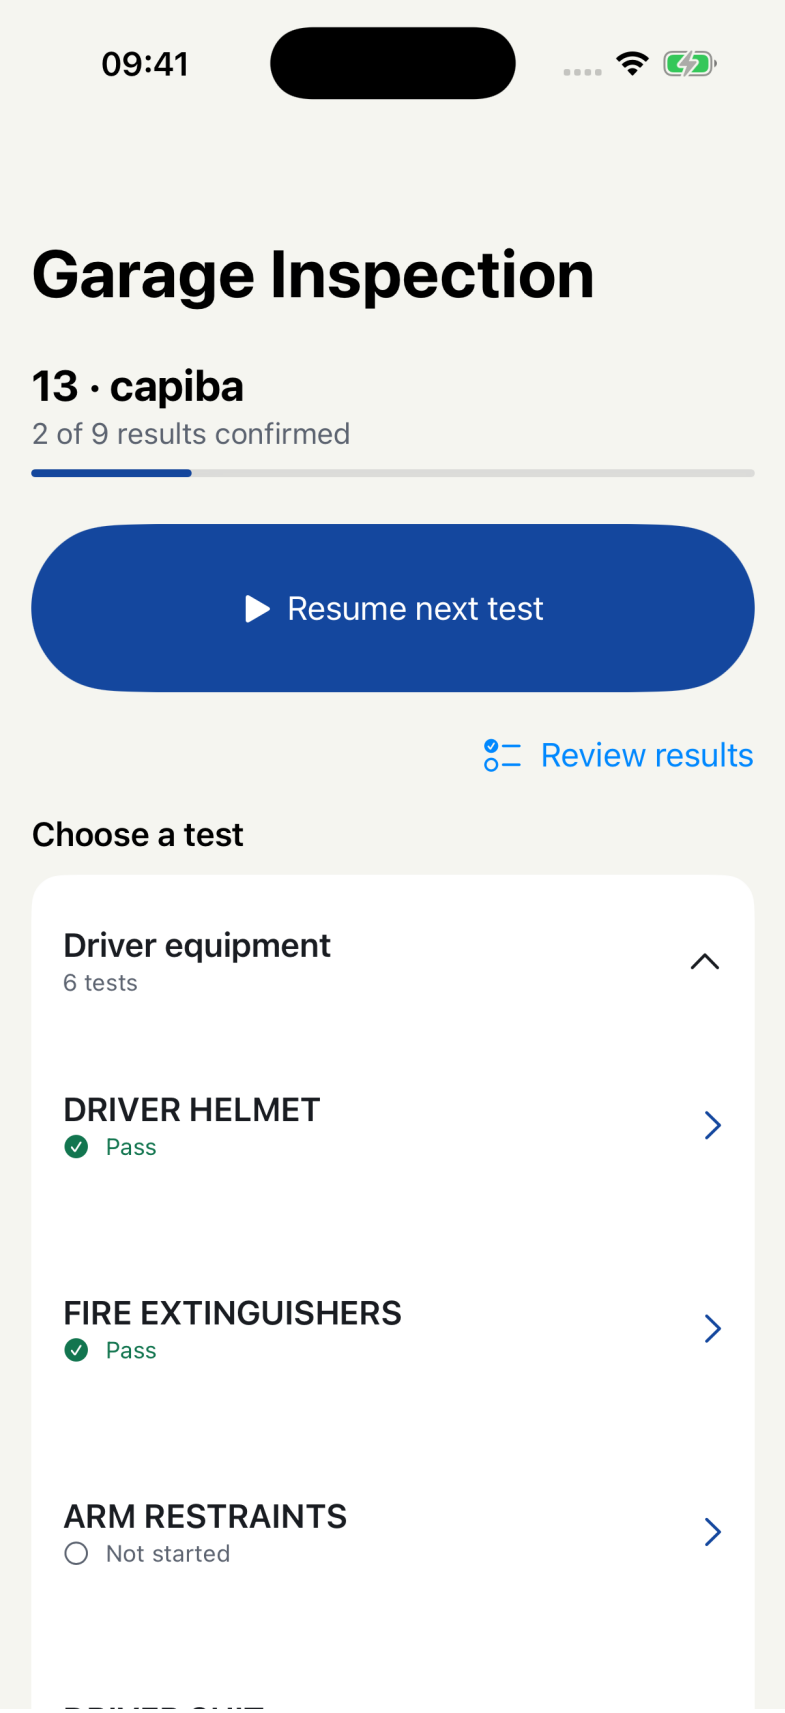

Applicable safety warning stays visible in normal execution.

Queue navigation

Pre run queue

01-pre-run-queue.png | checkpoint c5bb76b

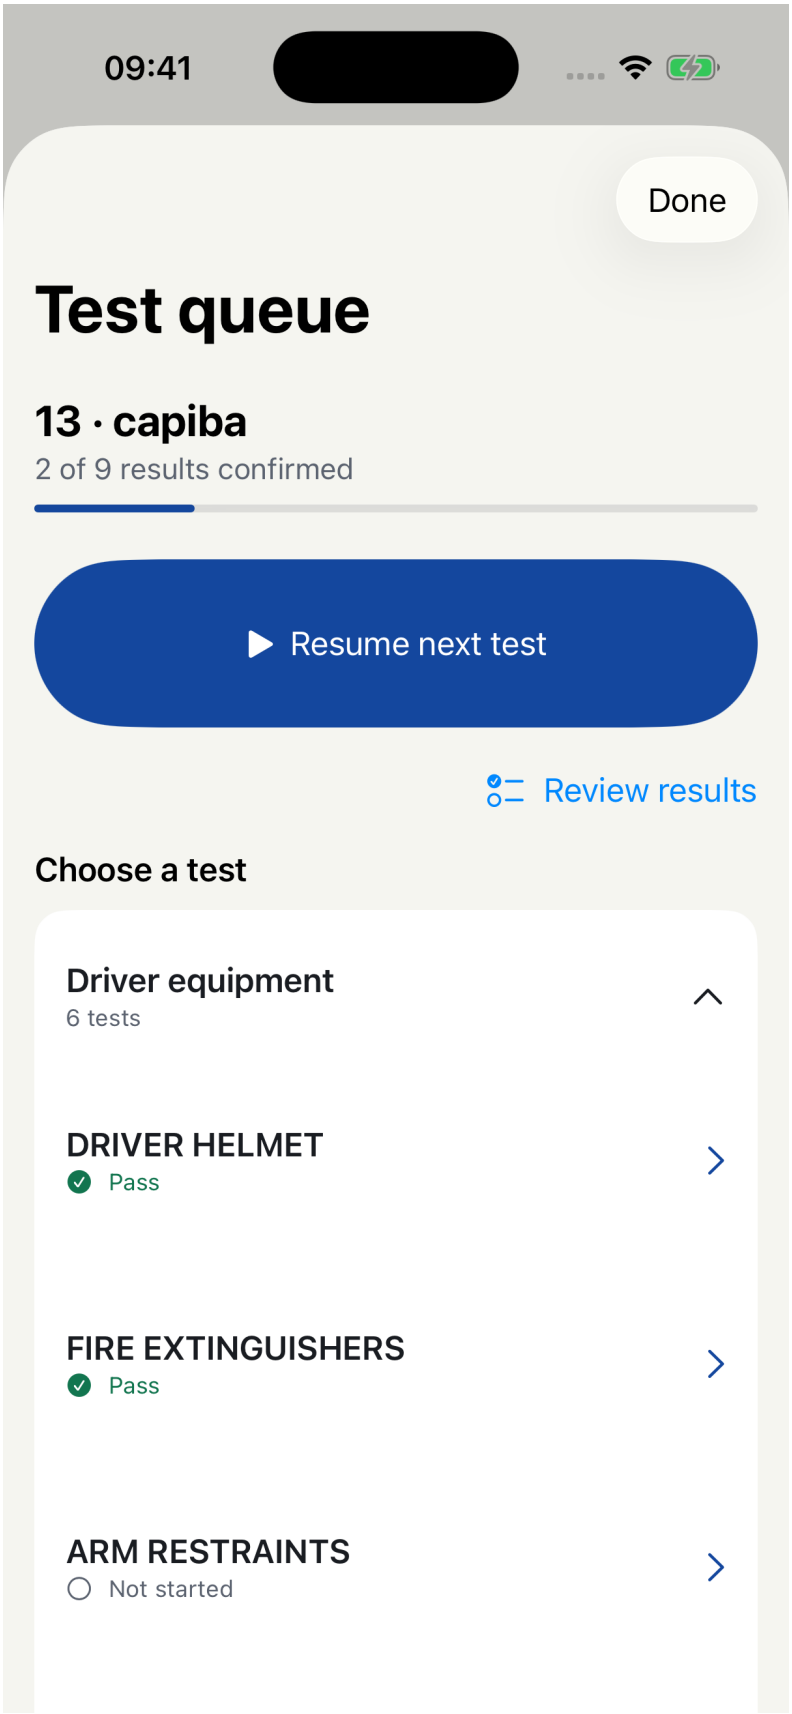

vehicle, confirmed progress, resume next test, and ordered navigation rows.

Queue navigation

Queue drawer

02-queue-drawer.png | checkpoint c5bb76b

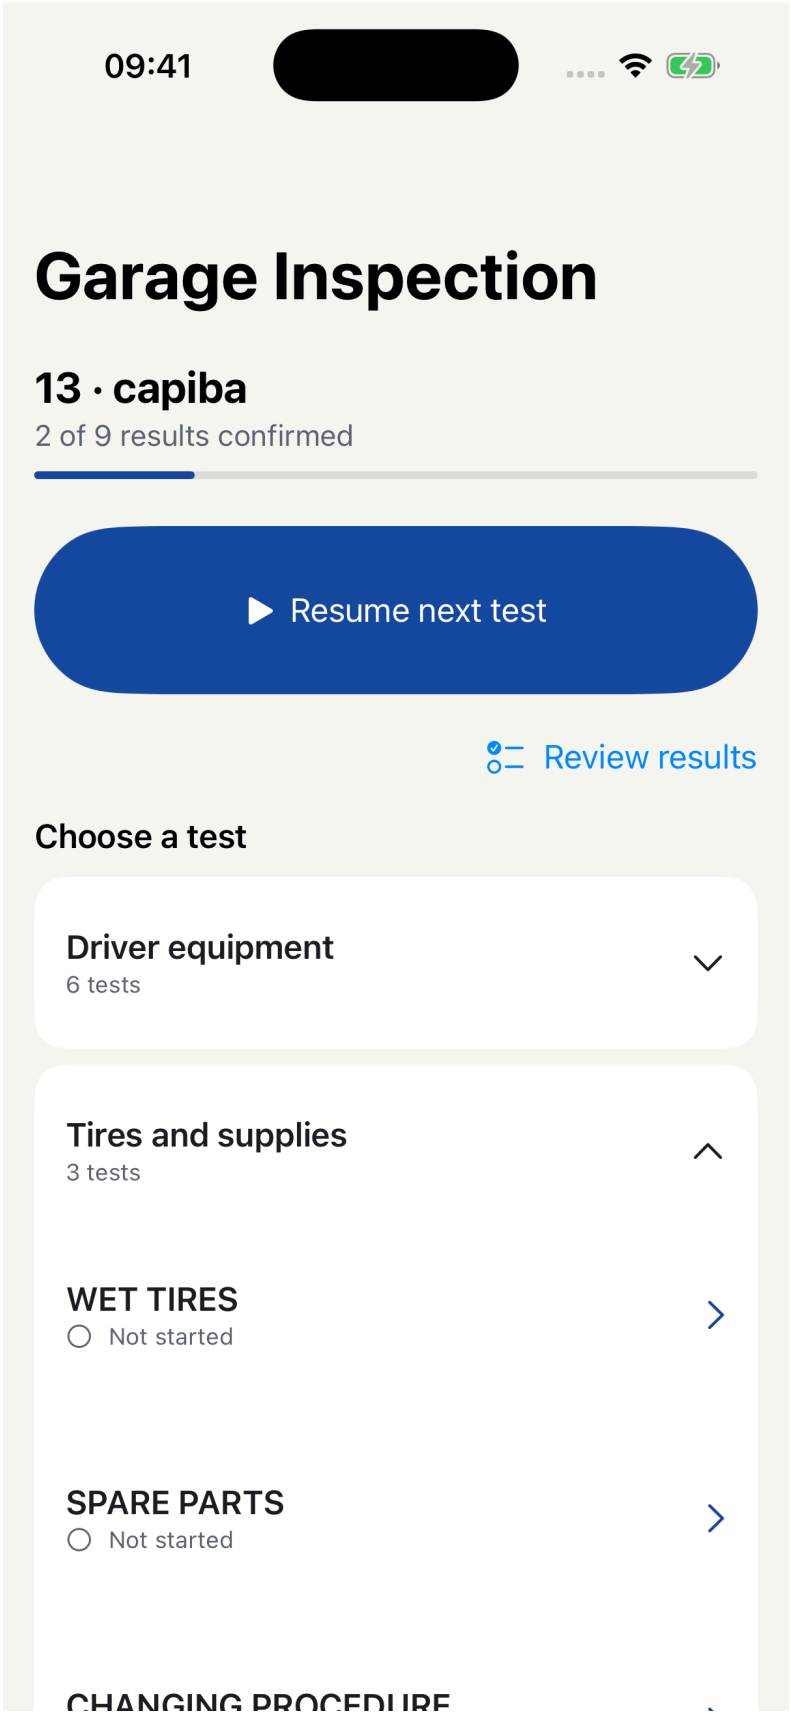

prominent Test queue opens a drawer with an explicit Done return.

Queue navigation

Section navigation

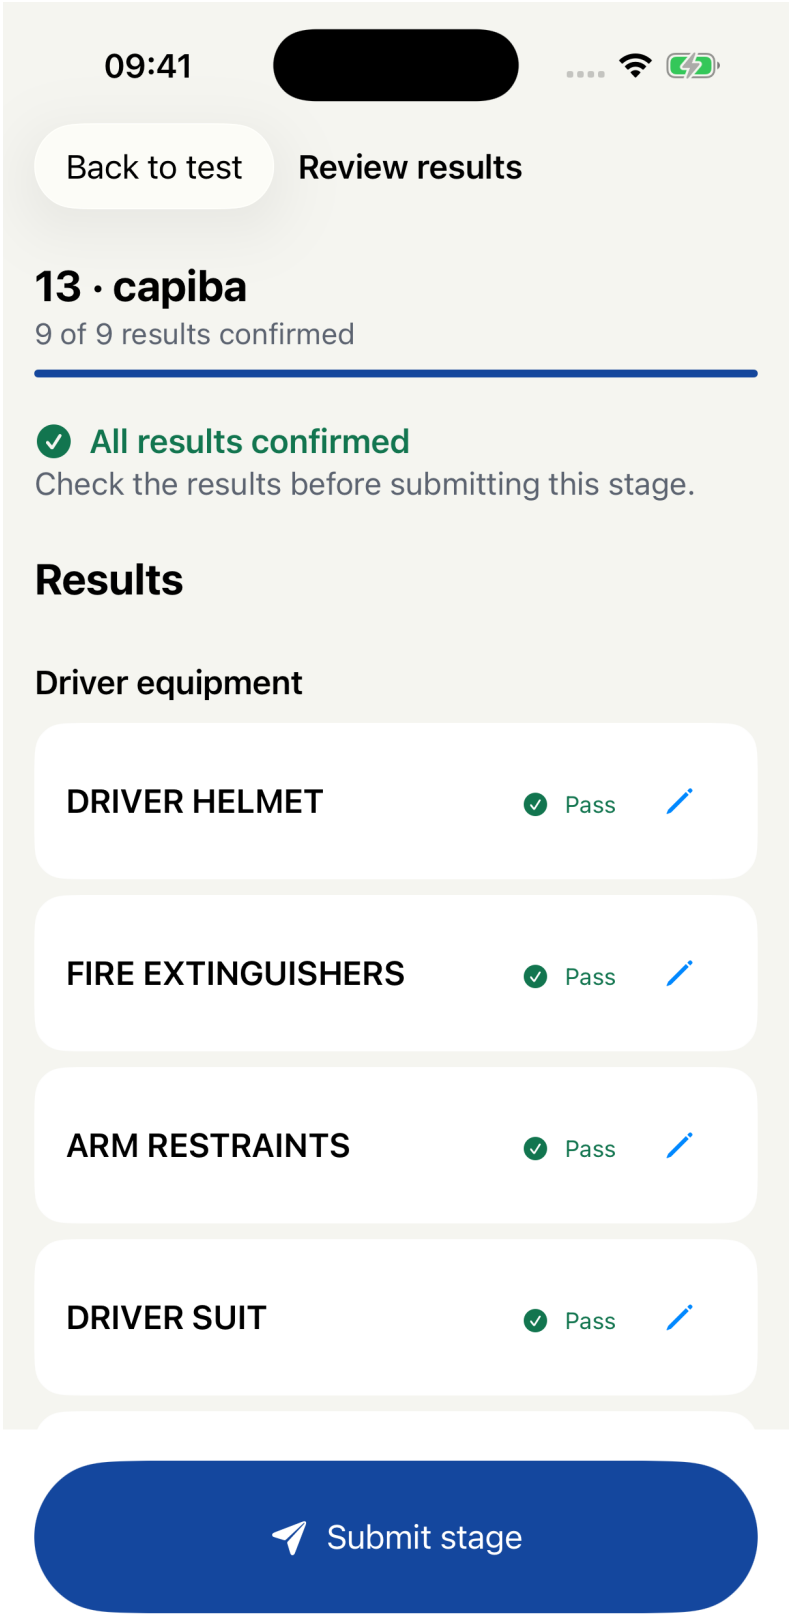

03-section-navigation.png | checkpoint c5bb76b

Driver equipment collapsed and Tires and supplies expanded.

Completed review

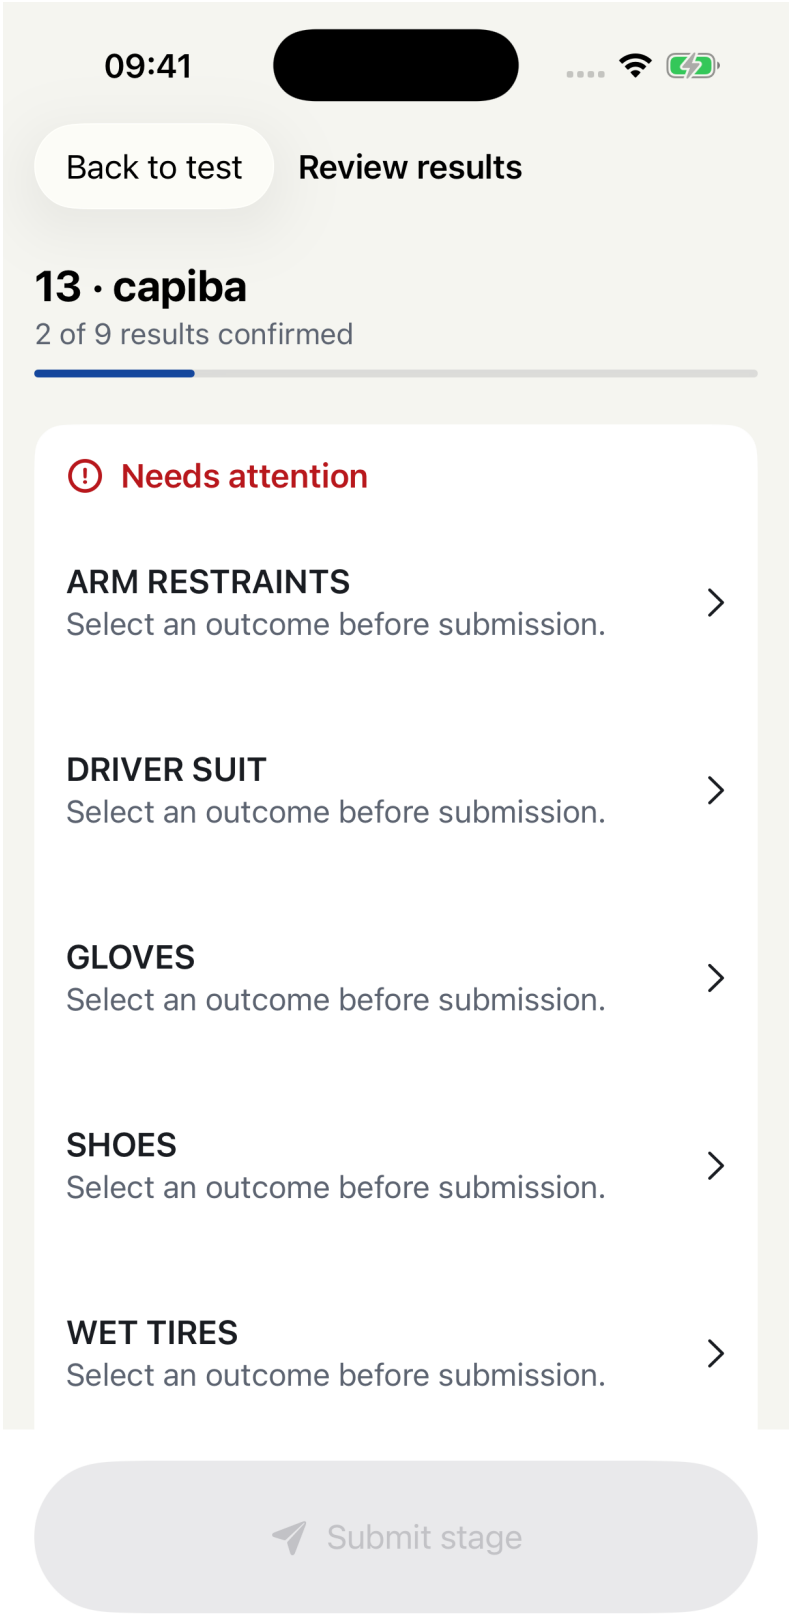

01-completed-review.png | checkpoint b002245

compact confirmed results, explicit Back to test, and final submission action.

Incomplete review

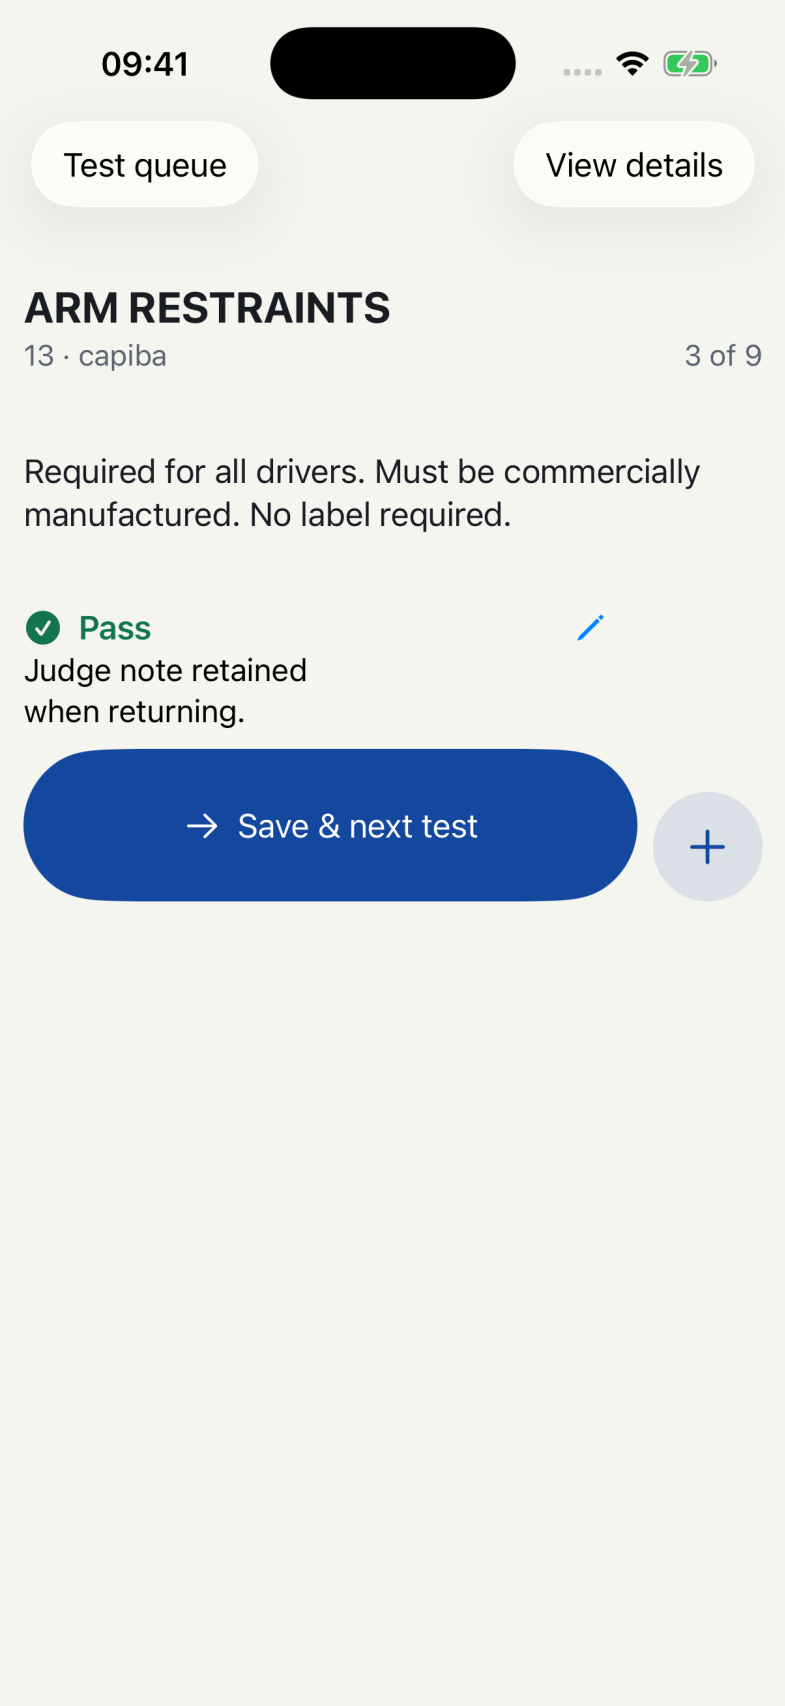

02-incomplete-review.png | checkpoint b002245

early review with actionable missing input and disabled final submission.

Return to test

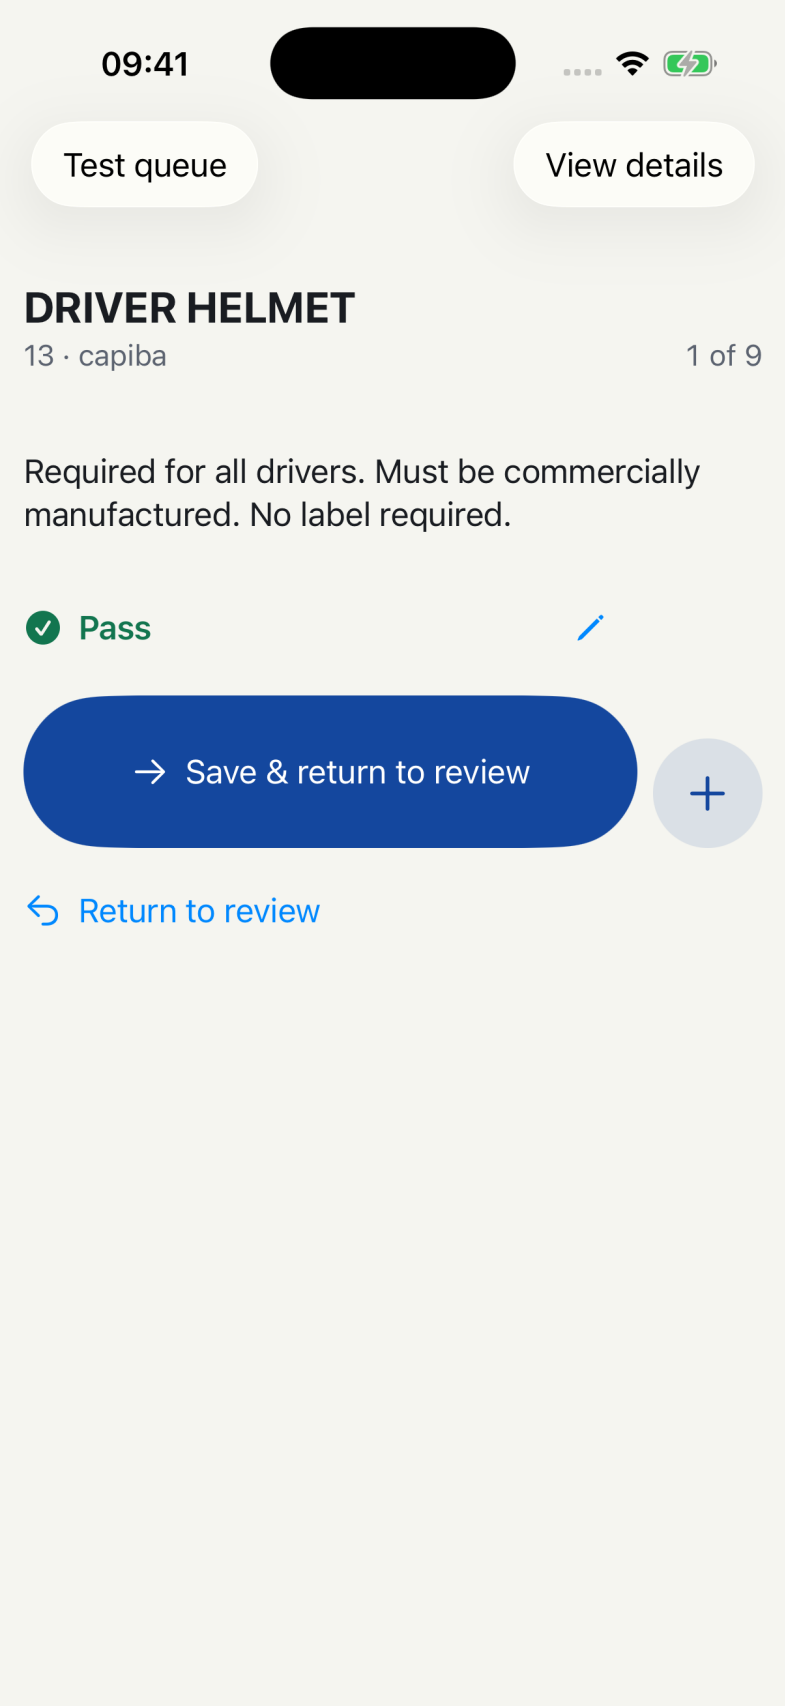

03-return-to-test.png | checkpoint b002245

actual coordinator return to test 3, retaining the selected Pass and judge note.

Review correction

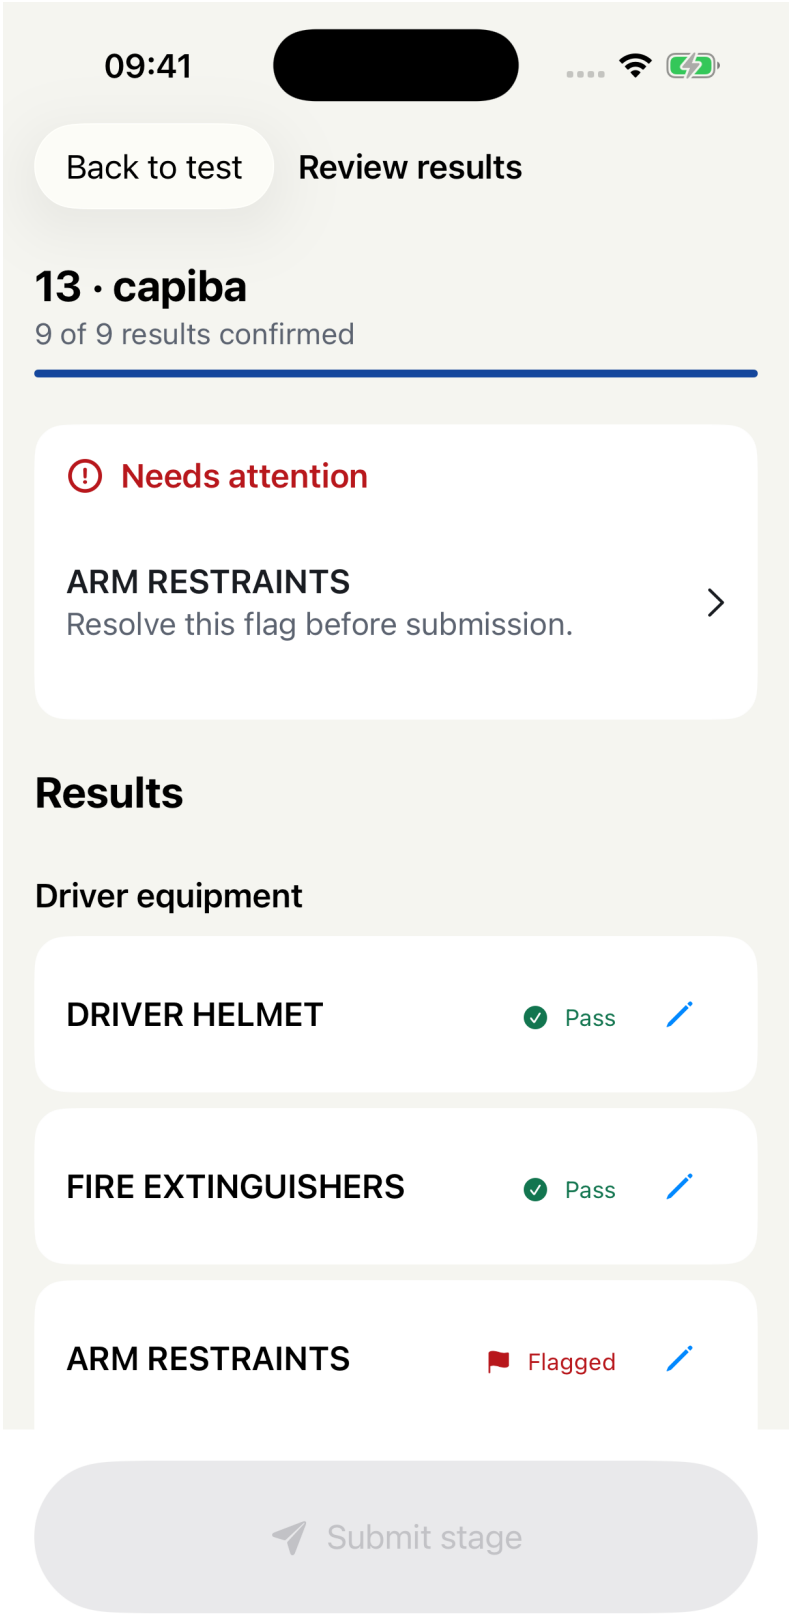

04-review-correction.png | checkpoint b002245

editing test 1 from review shows Save & return to review and a separate return without confirmation.

Flagged review

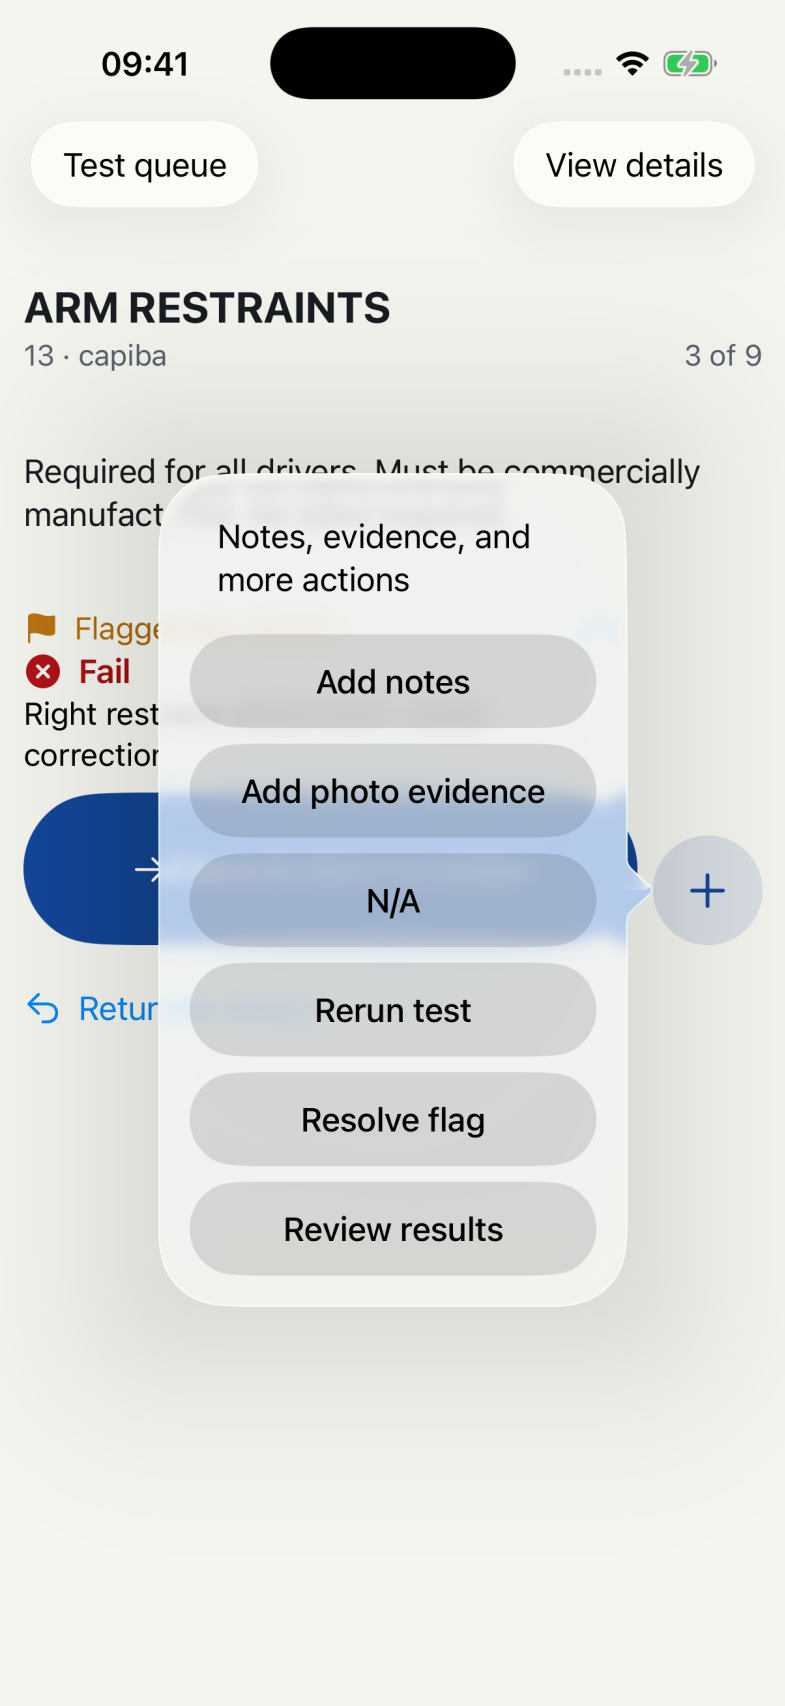

05-flagged-review.png | checkpoint b002245

an unresolved flag blocks submission despite all results being confirmed.

Resolve flag

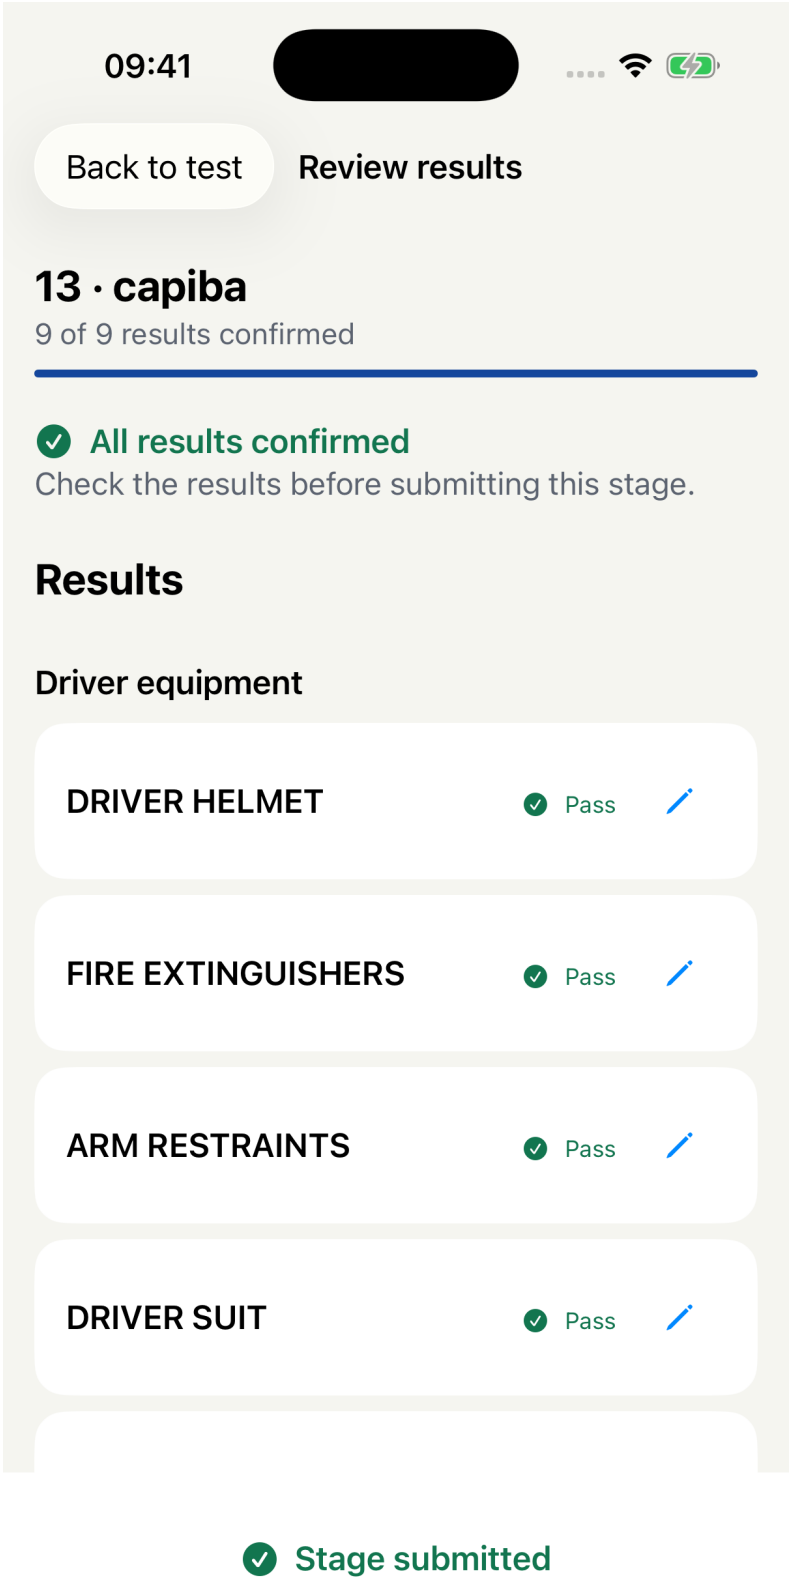

06-resolve-flag.png | checkpoint b002245

the secondary menu includes Resolve flag; the recorded Fail and notes remain visible.

Submitted

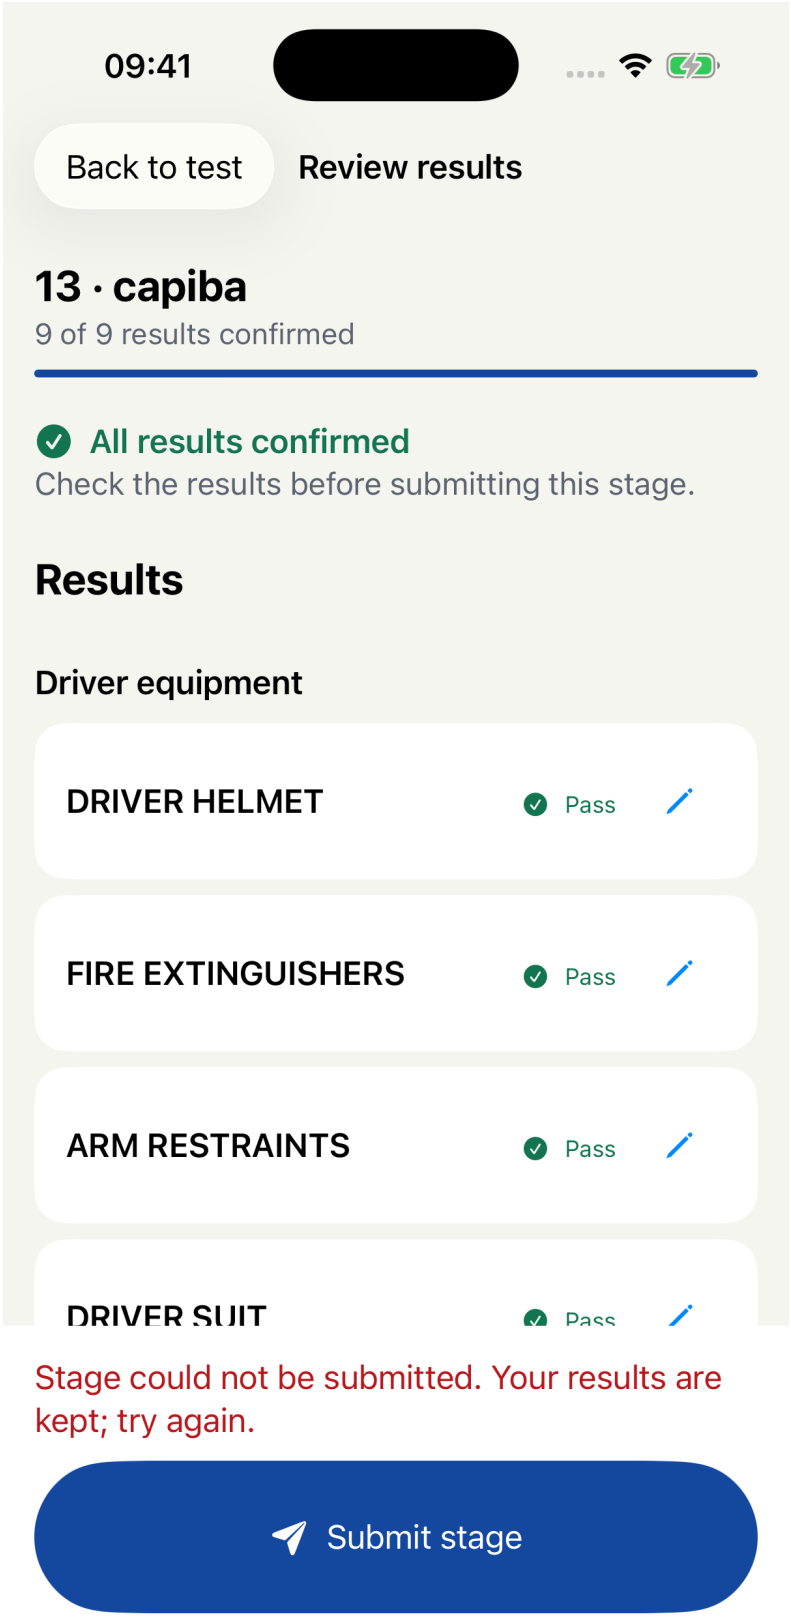

07-submitted.png | checkpoint b002245

an actual isolated stage snapshot write produces Stage submitted.

Submission failure

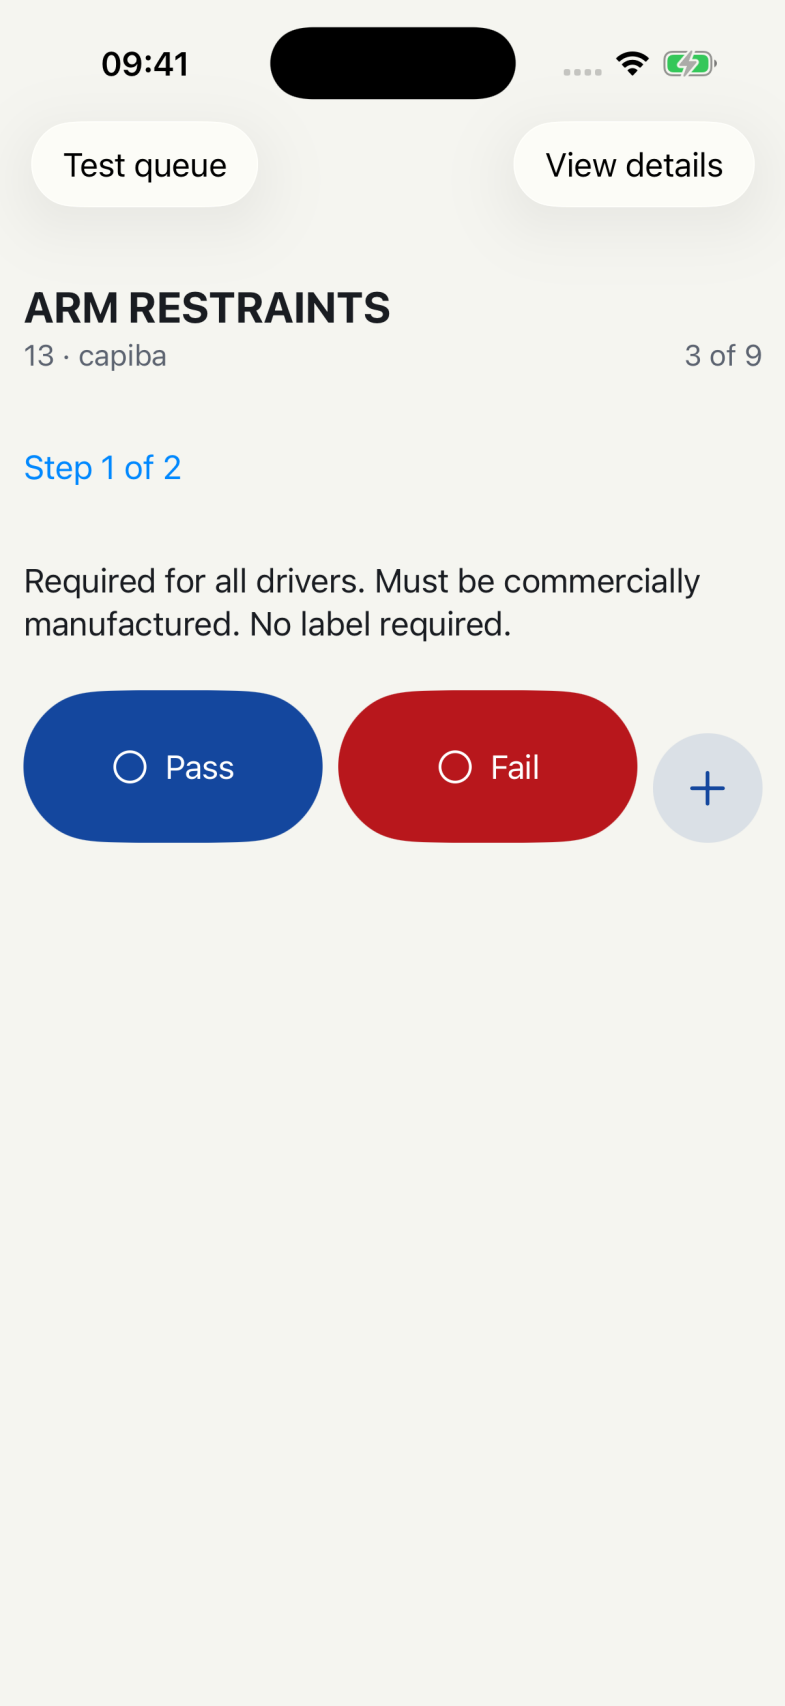

08-submission-failure.png | checkpoint b002245

simulated write failure preserves the review and exposes retry.

Multiple steps

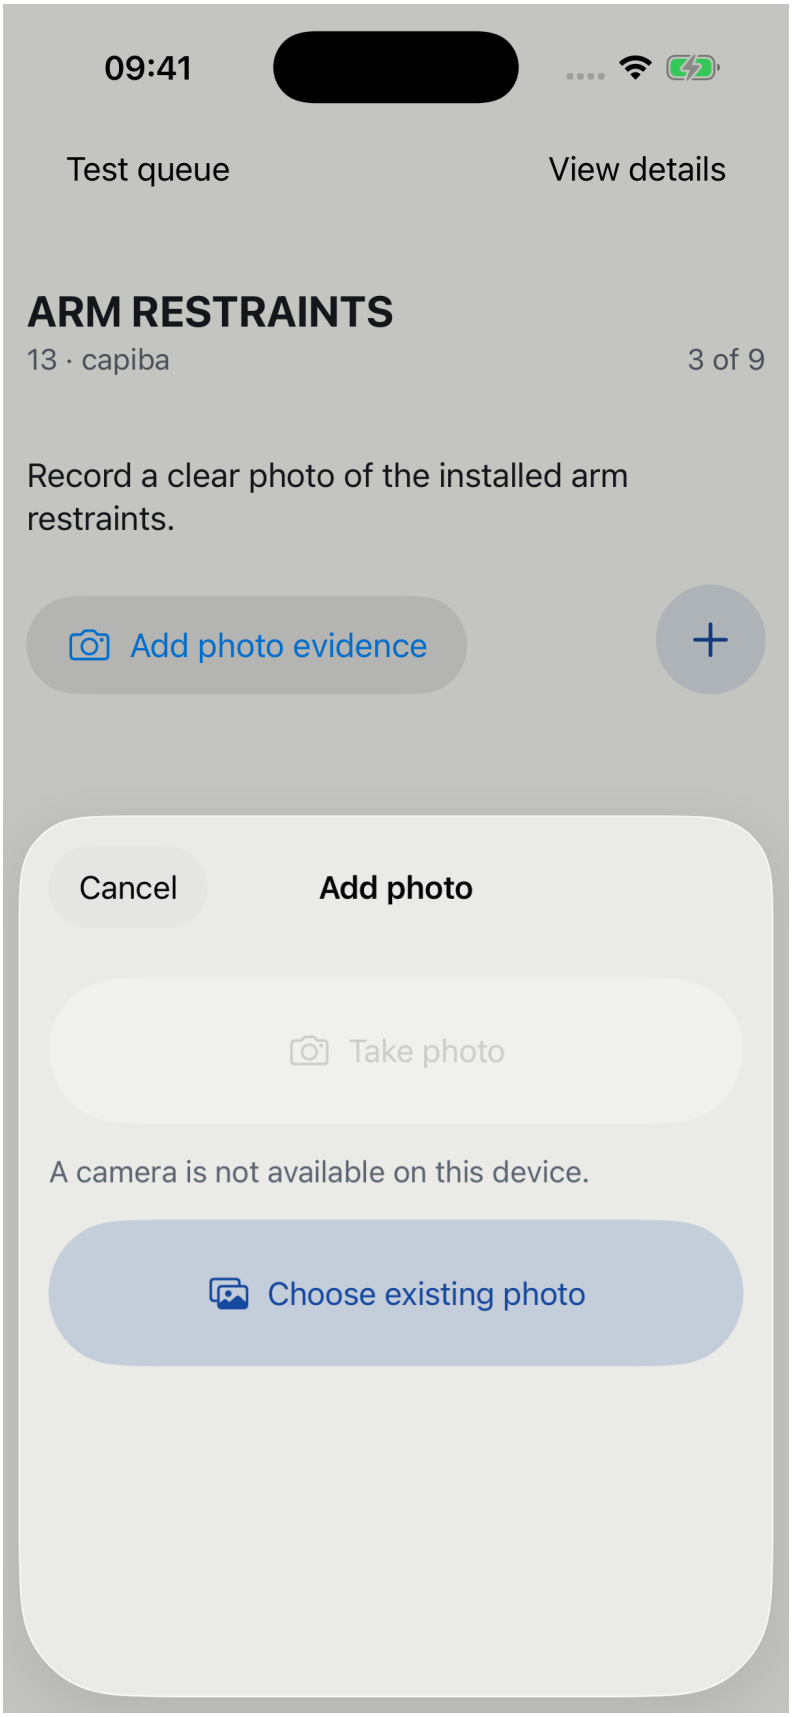

09-multiple-steps.png | checkpoint b002245

real multi-step navigation remains; single-step progress labels are removed.

Photo sources

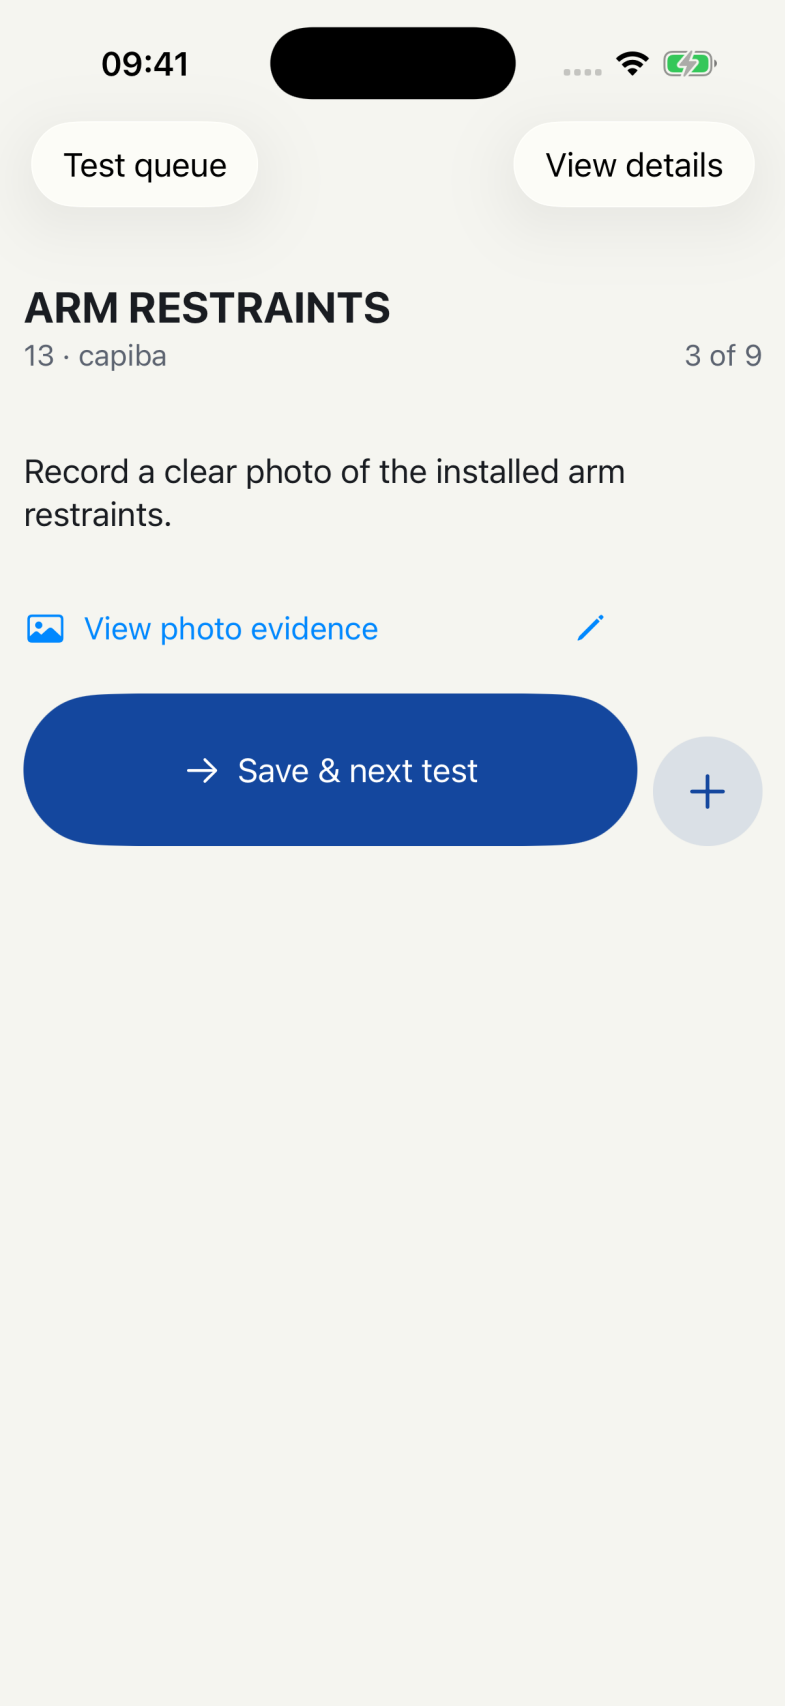

01-photo-sources.png | checkpoint dcd9f3b

the actual source sheet offers Take photo and Choose existing photo. The simulator has no camera, so capture is disabled with a clear explanation.

Persisted photo

02-persisted-photo.png | checkpoint dcd9f3b

a real stored image file satisfies the required-photo field and exposes preview and Save & next test. This isolated image is fixture evidence, not a physical camera capture.

Validation and delivery

Automated checks

Full scheme passed: 138 tests / 141 executed cases, zero failures and zero skipped. Final source checkpoint: 94156a5. Result bundle: /tmp/FSAE-simplified-ui-final-repaired.xcresult.

Meaningful coverage

Navigation restoration, final-test review, schema-driven readiness, preserved failed writes, confirmation gating, immutable submissions, unresolved flags, real photo assets, and catalog restoration.

Validation repair

The first full run found a stale blocker-count assertion and duplicate catalog identities during store startup. The final source safely restores saved records over bundled seeds, with a relaunch regression check and isolated catalogs. No deferred concurrency branch was integrated.

Build workflow

Xcode 26.2, FSAEInspectionChecklist scheme, dedicated iPhone 17 Pro / iOS 26.2 simulator, retained DerivedData, serial simulator testing. Debug full-suite and Release builds passed. Direct Xcode CLI used because XcodeBuildMCP was unavailable.

Snapshot evidence

All 34 captures passed boot-screen rejection and visual inspection. DEBUG fixtures isolate appearance checks from judge data. Transient saving and confirmation are held for documentation in selected captures.

Physical checks remaining

Native touch-flow, VoiceOver, large text, outdoor ergonomics, and camera hardware were not tested on a physical iPhone. Camera permission and capture code are implemented; the simulator honestly shows camera unavailability.

Obsidian vault

docs/simplified-ui-vault is ready to open as a vault. Home.md links the phases, workflow evidence, commit records, and snapshot index. Plan.canvas contains five native file nodes with vertical connections only.
